**Physico-chemical Aspects of Textile Coloration** Stephen M. Burkinshaw, 2016-02-08

The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured predominantly using aqueous dyeing processes, the coloration of textiles is a large-scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico-chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres. *Physico-Chemical Aspects of Textile Coloration* provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural, man-made, and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing; dyeing as an area of study as well as the terminology employed in dyeing technology; and science: contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and

fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO<sub>2</sub> fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration *Fundamentals of Materials Science and Engineering* William D. Callister, Jr., David G. Rethwisch, 2020-07-28 This text is an unbound three hole punched version Fundamentals of Materials Science and Engineering An Integrated Approach Binder Ready Version 5th Edition takes an integrated approach to the sequence of topics one specific structure characteristic or property type is covered in turn for all three basic material types metals ceramics and polymeric materials This presentation permits the early introduction of non metals and supports the engineer's role in choosing materials based upon their characteristics Using clear concise terminology that is familiar to students Fundamentals presents material at an appropriate level for both student comprehension and instructors who may not have a materials background This text is an unbound three hole punched version Access to WileyPLUS sold separately **Materials Science and Engineering** William D.
