

When field-supplied motors and drives have been installed, adjust the isolator springs as shown in Fig. 7 and described as follows:

1. Loosen the locknut on adjusting stem.
2. Turn the adjusting stem until the specified clearance of $1/16 \pm 1/32$ in. is obtained. (Turn clockwise to decrease clearance or counter-clockwise to increase clearance.)
3. Tighten the locknut.
4. Repeat for each of the isolator springs and ensure that the fan sled is floating on the springs.

External Vibration Isolation — Install external vibration isolators per certified drawings, job specifications, and the instructions of the isolator manufacturer.

For applications that do not require internal fan isolation, leave the holddown bracket screwed or bolted in place. Otherwise, the combination of internal and external unit isolation could lead to unwanted oscillation magnification.

The coil piping must also be isolated or have flexible connectors to avoid coil header damage due to motion or vibration. Flexible connections should also be installed at the fan inlet (if ducted) and at the discharge.

Roof Curb — Roof curbs can be field supplied for 39MW units and should be installed according to the manufacturer's instructions.

Curbs are typically shipped knocked down and require field assembly as follows:

1. Curbs greater than 12 ft in airway length will be split and joined together by a splice plate. Butt the two sections and bolt together with the splice plate as shown in Fig. 8.
2. Arrange sides and ends together at right angles and bolt together using the corner bracket as shown in Fig. 9.
3. Fasten cross supports, when required, per the drawings with supplied screws as shown in Fig. 10.

Before installing roof curb, check overall unit length. Figure 11 shows AHU (air-handling unit) curb pocket dimensions.

IMPORTANT: Verify installed curb dimensions before attempting to rig the unit and install it on the curb.
