CAR-T Cell Therapies for Non-Hematopoietic Malignancies: Taking Off The Training Wheels Avery Dexter Posey, Jr., John - Maher, Marcela V. Maus, 2020-04-24 Chimeric antigen receptor CAR T cell therapies for leukemia e.g. tisagenlecleucel and lymphoma e.g. axicabtagene ciloleucel have recently received regulatory approval in the United States Phase I/II trials have demonstrated complete remission of refractory or relapsed tumors in 50% 94% patients However the clinical successes of engineered T cells for the treatment of solid malignancies have thus far been few and far between Furthermore several instances of severe and lethal toxicities have arisen due to on target off tumor recognition of antigen by T cell products Recent advances in phase I trials for solid tumors as well as in pre clinical models have revealed several variables that will be important to consider for the successful use of CAR T cells in treating solid tumors These variables include i regional versus systemic delivery ii scFv versus ligand interactions iii antigen loss versus escape iv epitope spreading and v checkpoint expression on immune cells or tumor cells Also there remains outstanding mechanistic questions related to why differences exist in the persistence and tonic signaling of second generation CD28 versus 4-1BB co stimulated CAR T cells In addition we are now learning the roles of lympho depleting regimens and associated toxicities in modifying the persistence of engineered T cell therapies A more comprehensive view of CAR T cell strategies and important advances both of pre clinical and clinical evaluations in solid tumors is necessary to drive these therapies forward

Social Neuroscience Alexander Todorov, Susan Fiske, Deborah Prentice, 2011-02-11 The field of social cognitive neuroscience has captured the attention of many researchers during the past ten years Much of the impetus for this new field came from the development of functional neuroimaging methods that made it possible to unobtrusively measure brain activation over time Using these methods over the last 30 years has allowed psychologists to move from simple validation questions would flashing stimuli activate the visual cortex to those about the functional specialization of brain regions are there regions in the inferior temporal cortex dedicated to face processing to questions that just a decade ago would have been considered to be intractable at such a level of analysis These so called intractable questions are the focus of the chapters in this book which introduces social cognitive neuroscience research addressing questions of fundamental importance to social psychology How do we understand and represent other people How do we represent social groups How do we regulate our emotions and socially undesirable responses This book also presents innovative combinations of multiple methodologies including behavioral experiments

computer modeling functional Magnetic Resonance Imaging fMRI experiments Event Related Potential ERP experiments and brain lesion studies It is divided into four sections The first three sections present the latest research on respectively understanding and representing other people representing social groups and the interplay of cognition and emotion in social regulation In the fourth section contributors step back and consider a range of novel topics that have emerged in the context of social neuroscience research understanding social exclusion as pain deconstructing our moral intuitions understanding cooperative exchanges with other agents and the effect of aging on brain function and its implications for well being Taken together these chapters provide a rich introduction to an exciting rapidly developing and expanding field that promises a richer and deeper understanding of the social mind Understanding Events Thomas F. Shipley, Jeffrey M.

Zacks, 2008-02-25 We effortlessly recognize all sorts of events from simple events like people walking to complex events like leaves blowing in the wind We can also remember and describe these events and in general react appropriately to them for example in avoiding an approaching object Our phenomenal ease interacting with events belies the complexity of the underlying processes we use to deal with them Driven by an interest in these complex processes research on event perception has been growing rapidly Events are the basis of all experience so understanding how humans perceive represent and act on them will have a significant impact on many areas of psychology Unfortunately much of the research on event perception in visual perception motor control linguistics and computer science has progressed without much interaction This volume is the first to bring together computational neurological and psychological research on how humans detect classify remember and act on events The book will provide professional and student researchers with a comprehensive collection of the latest research in these diverse fields Mine Safety Education and Training Seminar, 1988 Object-Oriented

Discrete-Event Simulation with Java José M. Garrido, 2012-12-06 Researchers and developers of simulation models state that the Java programming language presents a unique and significant opportunity for important changes in the way we develop simulation models today The most important characteristics of the Java language that are advantageous for simulation are its multi threading capabilities its facilities for executing programs across the Web and its graphics facilities It is feasible to develop compatible and reusable simulation components that will facilitate the construction of newer and more complex models This is possible with Java development environments Another important trend that begun very recently is web based simulation i e and the execution of simulation models using Internet browser software This book introduces the application of the Java programming language in discrete event simulation In addition the fundamental concepts and practical simulation techniques for modeling different types of systems to study their general behavior and their performance are introduced The approaches applied are the process interaction approach to discrete event simulation and object oriented modeling Java is used as the implementation language and UML as the modeling language The first offers several advantages compared to C the most important being thread handling graphical user interfaces GUI and Web computing The second language UML

Unified Modeling Language is the standard notation used today for modeling systems as a collection of classes class relationships objects and object behavior
