Effects of Stress on Human Health Hülya Çakmur,2020-05-13 Stress response is a physiological reaction of the human body to potential dangers tangible or intangible For a living organism stress within physiological limits is necessary to stay alive But the protective effects of stress can easily be potentially harmful for the body when it is out of control Invariably life events and stress are combined It is well established that chronic and excessive stress may reduce the quality and duration of life Even though the negative health consequences of stress may be physical or psychological it has been observed that many people still maintain a disease free lifespan after exposure to intensive stressful conditions It can be inferred that some people have biologically and psychologically higher resilience capacity However there is no doubt that management of stress may be possible and could be learned Therefore it is important to be aware of stress management strategies to ensure a life free from stress related health problems and a healthy lifespan

Relational Mindfulness Roberto Aristegui,Javier Garcia Campayo,Patricio Barriga,2021-03-25 This book proposes a new approach to mindfulness based interventions presenting them not as individual

but as relational practices In the last decades mindfulness has exerted a growing influence on many fields of research and activity but always as an individual practice The authors in this volume believe that the strong development of mindfulness today implies considering a dialogue between this individualistic approach and the perspective of relational mindfulness based on social constructionism The volume is organized in two parts The first part focuses on the theoretical foundations of relational mindfulness The second part presents possibilities of applications of relational mindfulness in clinical and organizational settings to promote mental health and personal development Relational Mindfulness Fundamentals and Applications will be of interest to a wide range of professionals interested in applying mindfulness based interventions in mental health care and productive organizations such as clinical and health psychologists public health professionals and human resources analysts and consultants among others It is true that the metaphor of mindfulness has been enormously fruitful in its invitation to innovate By removing meditative practices from their ancient roots practitioners were free to create practices especially relevant to context At the same time there was also a recognizable loss in the profoundly rich heritage that was left behind For many of us the greatest loss resulted from the absorption of such practices into Western individualism What had once been an orientation to practice emphasizing our fundamental inter being had become a gateway to silent separation It is in this context that the present volume bursts into significance With special appreciation to the editors of this book we are treated to a multi dimensional exploration into the relational dimensions of mindfulness practices Bringing ideas experience and wisdom from across professions and across continents the contributors open an exciting path to the future Excerpt from the Foreword by Kenneth J Gergen
