Demolition of Concrete Locks on the Ohio River James A. Dennis, 1962 A test program in which concrete lock structures on the Ohio River were demolished by blasting with Composition C 4 explosive and milisecond delay electric caps is

reported Internal charges of Composition C 4 explosive detonated in multiple rows of boreholes were evaluated for breaching both reinforced and unreinforced concrete was 1 to 14 ft thick millisecond delay blasting techniques were used to establish the effectiveness of millisecond delay electric caps for reduction of air blast and ground shock improvement of fragmentation and control of throw of fragments A recently developed demolition technique for cutting steel rods was tested by using specially designed explosive charges to cut steel valve shafts under water Some conclusions are millisecond delay blasting results in reduction of air blast and ground shock increased fragmentation with reduced explosive quantity and controlled throw of fragments Millisecond delay blasting techniques can be applied to military demolition tasks requiring controlled blasts
