the fertility level in Japan and in other countries in terms of biodemographical components helping readers understand the mechanisms of fertility change in Japan

**A Shrinking Society** Toshihiko Hara, 2014-11-14 This is the book to focus on a new phenomenon emerging in the twenty first century the rapidly aging and decreasing population of a well developed country namely Japan The meaning of this phenomenon has been successfully clarified as the possible historical consequence of the demographic transition from high birth and death rates to low ones Japan has entered the post demographic transitional phase and will be the fastest shrinking society in the world leading other Asian countries that are experiencing the same drastic changes The author used the historical statistics compiled by the Statistic Bureau Ministry of Internal Affairs and Communications in 2006 and population projections for released in 2012 by the National Institute of Population and Social Security Research to show the past and future development of the dependency ratio from 1891 to 2060 Then utilizing the population life table and net reproduction rate the effects of increasing life expectancy and declining fertility on the dependency ratio were observed separately Finally the historical

relationships among women's survival rates at reproductive age the theoretical fertility rate to maintain the replacement level and the recorded total fertility rate TFR were analyzed Historical observation showed TFR adapting to the theoretical level of fertility with a certain time lag and corresponding to women's survival rates at reproductive age Women's increasing lifespan and survival rates could have influenced decision making to minimize the risk of childbearing Even if the theoretical fertility rate meets the replacement level women's views of minimizing the risk may remain unchanged because for women the cost benefit imbalance in childbearing is still too high in Japan Based on the findings the author discusses the sustainability of Japanese society in relation to national finances social security reform family policies immigration policies and community policies

Fertility Transition in the Developing World John Bongaarts, Dennis Hodgson, 2022-09-01 This open access book provides an overview and analysis of the causes and consequences of the massive and highly consequential transition in reproductive behaviour that occurred in Asia Latin America and Africa since the mid 20th century In the 1950s contraceptive use was rare and women typically spend most of their reproductive years bearing and rearing children By 2020 fertility and contraceptive use in Asia and Latin America reached levels commonly observed in the developed world Africa's fertility is still high but transitions have started in all countries This monograph is the first to provide a comprehensive analysis of these trends and their determinants covering changes in reproductive behaviour e.g. use of contraception and abortion preferences e.g. desire to limit and space births and the role of socioeconomic development e.g. education The role of government policies and in particular family planning programs is discussed in depth Particular attention is given to provide a balanced assessment of several political and scientific controversies that have beset the field As such this book provides an interesting read for a wide audience of undergraduate and graduate students researchers and public health policy makers

**Japanese Population Geographies II** Yoshitaka Ishikawa, 2023-06-13 This is the first anthology that conveys in detail the actual situation of population geographies in Japan a country facing some of the world's most serious demographic trends such as low fertility population aging and depopulation The anthology consists of two volumes with the common title Japanese Population Geographies All of the included entries are based on original Japanese papers written by leading geographers and published within the past few years useful for understanding Japan's current population geographies The first volume analyzes the postwar transition of internal migration examining the structural changes of population in urban areas and proposes a new measure different from the traditional resident population This volume also presents an investigation of the retirement migration of baby boomers as well as displacement migration due to the 2011 Great East Japan Earthquake The second volume's contents examine the residential choices of minority populations such as foreign residents and sexual minorities It also discusses future prospects associated with mono polar concentration into Tokyo regional forecasting using population projections based on small area units and the importance of a politico economic perspective in future research Taken as a whole this anthology offers the following two significant contributions First the

excellent achievements obtained in Japan which is experiencing serious demographic trends reflect key developments within the context of the world's population geography. The second contribution is that the publication brings the latest insights and important policy implications to countries that are facing various issues associated with decreasing fertility, aging population, and declining population.

**Exploring the Effect of Retirement on Health in Japan** Masaaki Mizuochi, 2021-07-12 This book examines the relationship between retirement and health of older people in Japan's super-aging society and provides a key to understanding the remarkable longevity of the population. It also furnishes new evidence in this research field where the findings have been conflicting and the detailed causal mechanism has not been clarified for many years. For that purpose, a large-scale survey was used: The Longitudinal Survey of Middle Aged and Elderly Persons, which was conducted in Japan from 2005 to 2015 with 34,240 respondents aged 50-59 years in the first sample. Using this longitudinal survey, which focused on people just before retirement and rigorous causal inference including instrumental variable and panel estimation, several research questions were tested. Specifically, existing literature does not provide sufficient findings about the heterogeneity in the effect of retirement on health. Thus, we have questions which should be addressed: does retirement affect health immediately or with delay? does the lifestyle before retirement matter for post-retirement health and which is better for health: retiring early or late? The lack of this viewpoint is believed to have led to the conflicting previous findings. If we know the answers to the questions, we would be able to understand the mechanisms between retirement and health and prepare more properly for better retirement life. Showing the results of the testing of these questions, this book provides readers, researchers, and policymakers a comprehensive understanding of the retirement health relationship and a suggestion for an effective labor and health policy in an aging society.

*Shrinking Japan and Regional Variations: Along the Hokurikudo and the Tosando II* Fumie Kumagai, 2022-01-03 This book provides an insightful sociological study of the shrinking Japanese population through a regional variation perspective as it varies significantly by municipality even within the same prefecture. Using demographic data on municipal levels, the book identifies the power unique to each municipality which can mobilize a shrinking but sustainable Japan. The study identifies the principal explanatory factors based on the small area data of e-Stat through GPS statistical software tools such as G-census and EvaCva within a historical perspective. The theoretical framework of this study is the reason for regional variations in Japan is the Goki Shichido (Five Home Provinces and Seven Circuits of Ancient Japan). This historical knowledge helps in understanding the significance of the regional cultural heritage that remains in each municipality today. The book pays special attention to municipal variations within the same prefecture, utilizing a completely unique approach unlike those that have been pursued by other researchers. This book studies three present-day prefectures for detailed analyses based on the Goki Shichido framework for impacts of regional variations of population decline in Japan. They are Niigata Prefecture (made up of the formerly named Echigo and Sado provinces), Ishikawa Prefecture (formed by the ancient Kaga and Noto provinces), and Fukui Prefecture (based on the earlier Wakasa and Echizen).

provinces of the Hokurikudo Nagano Prefecture still called Shinano province today and commonly divided into four areas and ten regions and Gifu Prefecture composed of the ancient Mino and Hida provinces of the Tosando as examples of the impact of municipal power on regional variations of shrinking Japan However due to the limitation of the number of pages set forth for Springer Briefs in Population Studies Population Studies of Japan for which the current publication is a part it has become necessary to divide the book into two volumes namely Volume I and Volume II Because of this limitation the current Volume II consisted of four chapters They are Chapter 1 Fukui Prefecture in the Hokurikudo Chapter 2 Nagano Prefecture in the Tosando Chapter 3 Gifu Prefecture in the Tosando and Chapter 4 Epilogue The Future of Shrinking Japan The remaining two prefectures i e Niigata and Ishikawa prefectures in the Hokurikudo area have been discussed in the Volume I of this book By presenting unique analyses of regional variations on small municipal levels with demographic variables social indicators and historical identities this book offers suggestions for effective regional policies to revitalize a shrinking Japan to a sustainable one

Hokurikudo area Nagano and Gifu both in the Tosando area will be discussed in the Volume II of this book By presenting unique analyses of regional variations on small municipal levels with demographic variables social indicators and historical identities this book offers suggestions for effective regional policies to revitalize a shrinking Japan to a sustainable one The Volume I therefore analyzes and discusses in detail both Niigata and Ishikawa prefectures of the Hokurikudo

**Fertility Decline and Background Independence** Shuichirou Ike, 2015-08-03 In this book the author maintains that fertility declines independently of its background Normally fertility decline is thought to occur as a result of alteration in the socioeconomic background such as the decline of the infant mortality rate urbanization the level of literacy and so on This point of view has been regarded as equivalent to demographic transition However the concept of demographic transition is so superficial naive and unscientific that it should be applied merely to the ostensible demographic phenomena not to the mechanisms of fertility decline The author regards this way of thinking i e that the occurrence of fertility decline is dependent on socioeconomic background as the background dependence of fertility decline On the contrary there is considerable counterevidence to the background dependence of fertility decline The argument is made that background dependence lacks positive evidence and predictability and consequently is falsifiable That decisive counterevidence is introduced in this book The author revives the diffusion hypothesis of fertility decline at the point of the number of children per couple as the reaction diffusion process in a mathematical equation Fertility decline in Europe in the eighteenth and nineteenth centuries occurred as a reaction diffusion process independent of socioeconomic background In Japan as well fertility the number of children per couple declined independently of background This book provides ample evidences persuasively demonstrating this independence of fertility in Japan The occurrence of marriage is also independent of socioeconomic background Thus the author formalizes the marriage function as an integral equation of marriage probability as a result it demonstrates a better fit with the observed data than does any other marriage function Occurrence of marriage is almost solely dependent on the density of marriages that occur in a given subspace

*Educational Assortative Mating in Japan* Fumiya Uchikoshi, James M. Raymo, 2021-09-06 This book represents a first attempt to comprehensively discuss and investigate causes and potential implications of changing patterns of spouse pairing in Japan and to consider similarities and differences with patterns observed in the USA and other low fertility Western societies In this book research on educational assortative mating in Japan is summarized and updated This book contributes to research on the demography of contemporary Japan by overviewing theoretical and empirical linkages between marriage behavior and processes of social and economic stratification It also extends the large body of research on assortative mating and stratification by incorporating insights from the understudied context of Japan The authors draw upon multiple data sources both survey and administrative data to update and extend previous research on who marries whom in Japan The wide range of consequences considered includes income inequality the intergenerational transmission of advantage and disadvantage marriage and fertility timing lifelong singlehood childlessness and the family

roles of husbands and wives Throughout the manuscript Japan is considered in comparative perspective by employing the large USA and international literatures on assortative mating *Advanced Introduction to Demography* Lutz, Wolfgang, 2021-09-10 Highlighting the power of multi dimensional demography this Advanced Introduction addresses the most consequential changes in our societies and economies using quantitative approaches It defines three demographic theories with predictive power demographic metabolism transition and dividend and repositions the discipline at the heart of social science Demography for Planning and Policy: Australian Case Studies Tom Wilson, Elin Charles-Edwards, Martin Bell, 2015-11-25 This edited collection shows how demographic analysis plays a pivotal role in planning policy and funding decisions in Australia Drawing on the latest demographic data and methods these case studies in applied demography demonstrate that population dynamics underpin the full spectrum of contemporary social economic and political issues The contributors harness a range of demographic statistics and develop innovative techniques demonstrating how population dynamics influence issues such as electoral representation the distribution of government funding metropolitan and local planning the provision of aged housing rural depopulation coastal growth ethnic diversity and the well being of Australia's Indigenous community Moving beyond simple statistics the case studies show that demographic methods and models offer crucial insights into contemporary problems and provide essential perspectives to aid efficiency equity in public policy and private sector planning Together the volume represents essential reading for students across the social sciences as for policy makers in government and private industry **Modeling Shifting Mortality, and Its Applications** Futoshi Ishii, 2023-07-31 This book describes a novel method for mortality modeling applying the shifting feature of the mortality curve In Japan the increase and pace of the extension in life expectancy have been quite remarkable Therefore existing mortality models often cannot capture the peculiarities of Japanese mortality nor can the Lee Carter model which is now regarded internationally as a standard model One of the important concepts to model recent Japanese mortality is a shifting feature In this book the linear difference model which has many advantages for modeling and analyzing Japanese mortality is introduced The book shows applications of the model to mortality projection with a tangent vector field approach and decomposition of the change of modal age at death The models introduced here are useful tools for modeling mortality with strong shifting features as in Japan **Shrinking Japan and Regional Variations: Along the Sannyodo** Fumie Kumagai, 2024-05-20 Taking the Goki Shichido Five Home Provinces and Seven Circuits of Ancient Japan as a theoretical framework this book examines shrinking Japan from a regional variation perspective by municipality along the ancient Sannyodo which comprises eight provinces and four prefectures today The book identifies the principal explanatory factors based on the small area data of e Stat through GPS statistical software tools such as G census and EvaCva within a historical perspective This historical knowledge helps in understanding the significance of the regional cultural heritage that remains in each municipality today The book pays special attention to municipal variations within the same prefecture presenting a

completely unique approach from what other researchers have pursued This book studies two present day prefectures along the ancient Sannyodo for detailed analyses of the impacts of regional variations of population decline in Japan They are Hiroshima Prefecture made up of the former Bingo and Aki provinces and Yamaguchi Prefecture formed by the ancient provinces of Suo and Nagato The reasons for selecting these two prefectures of ancient Sannyodo are twofold First they are made up of a multiple number of the ancient provinces Second other prefectures that fall under the Sannyodo have been studied in the previous works of the present author by adopting the same methods of analyses Thus by presenting unique analyses of regional variations on small municipal levels in Hiroshima and Yamaguchi prefectures along the Sannyodo this book offers suggestions for effective regional policy to revitalize shrinking Japan to a sustainable one **Pregnancy**

**Outcomes of Unmarried Women in Japan (1995-2015)** Yukiko Senda, 2021-08-27 This book provides a key to understanding why there was an increase in extra marital fertility in Japan from the 1990s to the 2010s particularly between 1995 and 2015 and the factors which contribute to the multistratification of unmarried mothers the number of which has increased ensuingly It also allows for international comparison by providing data on outcomes of extra marital childbirth Previously it was believed that the idea of a second demographic transition did not apply to Japan which had a relatively low rate of extra marital fertility However more recently though still at a low level a subtle but gradual rise is seen in the number of women who become unmarried mothers as a result of births outside marriage This trend suggests that the social environment surrounding pregnancy childbirth and marriage is changing In this book various data such as national statistics nationwide surveys and media discourse are analysed with a view to revealing the factors affecting unmarried women s decisions when they discover they are pregnant Various matters are discussed such as changes in sexual activity and contraceptive use advance in reproductive technology the law and government policies pertaining to adoption social consciousness towards unwed mothers the change in perception of abortion from the religious perspective and difference of socioeconomic status depending on the women s occupation Facts from vital statistics are first laid out showing that while abortion has consistently been on the decrease from the 1990s onward shotgun marriages have peaked out Adoption is rare and remains very small in proportion while extra marital fertility is on the rise The author then points to the possibility that greater lenience found in the social consciousness towards unwed mothers in recent years is a pull factor for the increase in extra marital fertility Further by analysing vital statistics it is revealed that the probability of becoming a mother without marrying changed with the woman s occupation explicable by the stability of employment and level of income and that between 1995 and 2015 the effects of the job factor are changing If we assume that unlike the first demographic transition model the second demographic transition may show a similar direction but be on a different scale according to the country it is possible to say that Japan too is experiencing the second demographic transition
