[The Broadcaster's Guide to RBDS](#) Scott Wright, 1997-07-29. This handbook is intended to give the broadcast industry an authoritative guide to the Radio Data System (RDS), also called Radio Broadcast Data System (RBDS). Since the standard's adoption, about 700 stations have begun broadcasting RDS in the United States. There is a wide variety of encoding equipment, with prices starting as low as \$400, and over 30 models of RDS receivers have been introduced for cars, home receivers, portable, and even PC receivers. Automobile manufacturers such as General Motors, Ford, Audi, and Porsche now offer RDS on new vehicles. Yet despite all the support equipment in place, the FM broadcaster has been reluctant to implement and utilize this service, mainly because of a lack of understanding of what RDS can do for the station. This book finally provides the information required to understand RDS and its possibilities on a variety of levels so that everyone involved in radio can make the most of it. Station owner, program director, salesperson, and talent alike will find the information he or she requires to maximize the possibilities of this new technology. Each feature of the system is explained in terms of its practical implementation at the station, and interviews with broadcasters currently using the system add a hands-on perspective. Scott Wright is a recognized pioneer in RDS development. As the designer of Delco Electronics' first RDS receiver, he has been extremely active in the development of the RDS standard in the US and in efforts to educate the broadcast community about its potential. He has represented Delco at the European Broadcasting Union's (EBU) RDS Forum.
