

## Handling errors

Film must be handled carefully to avoid handling errors. Feeding film into the automatic processor either too quickly or too closely together can cause the film to overlap or stick together causing a missing image. Other errors can occur from fingerprints, chemical spills onto the film, static electricity, storage of unprocessed film in humid or hot conditions dirty rollers and emulsion tears.

### Missing image

An image that is partially or totally missing (refer Figure 3.1) may be caused by:

- Partial emersion in the developer. If the solution level is low only that part of the film immersed in developer will have an image.
- Leaving the film in the rinse water for extended periods of time, for example overnight separates the film emulsion from the film base.
- Films contacting each other or the sides of the tank.
- Splashing developer on the film before processing.

'C' shows the result of splashing developer on the film before processing.

'B' shows where fixer acted on an area of undeveloped film. The film was not exposed to developer because it was contacting another film or the side of the tank.

### **Preventing an image that is partially or totally missing**

Keep the developer solution at the correct level. Check levels daily.

Do not leave the radiograph in the rinse water for extended periods of time.

Ensure films are kept separate and do not touch the sides of the tank. Immerse hangers separately into processing tank.

Ensure chemicals are not splashed on film before processing.

### White marks

White marks on the radiograph (refer Figure 3.2) may be caused by:

- Air bubbles. When film is processed manually air bubbles can cling to the surface of the film preventing the developer from reaching the film emulsion causing a white or unprocessed spot on the radiograph.
- Splashes of fixer onto the film before processing causes a white spot on the radiograph.
- Films contacting each other or the sides of the tank during processing cause white or brown spots.
- Bending the film packet before the film has been exposed.
