Honeywell

DeltaNet FS90 Operating Instructions

SYSTEM OPERATION

A normally functioning DeltaNet Fire & Security System is indicated by the green RUN and green POWER LEDs on the powered Control Board. If a Communication Board is installed, the Communication Board and TRANSMIT and RECEIVE LEDs blink as data is communicated.

Power Supply Supervision

The power supply circuits for the DeltaNet FS90 Fire & Security system are monitored for integrity. Trouble conditions in these circuits are indicated by Low Battery (yellow) and Power (green) LEDs on the CA control board. In the normal, supervisory condition, the yellow Low Battery LED is off and the green Power LED is on. A trouble condition in the power supply and/or battery is indicated when either the green Power LED is blinking or the yellow Low Battery LED is on. If this occurs, contact a service technician to determine the nature of the trouble condition. By removing the batteries from the system and testing their condition. With the batteries out of the system, proper functioning of the power supply, battery charger and battery supervision circuits should be verified. Any faulty component must be replaced.

Modes of Operation

The DeltaNet Fire & Security System can operate independently (Stand-Alone Mode) or as a Data Gathering Panel (DGP) in a higher-order system (DGP Mode). DGP Mode is in effect when a Communication Board is plugged into the Motherboard and active communication takes place. If communication fails, the system operates in Stand-Alone Mode.

LJ Communication/Display Board Switch

When the LJ Board MULTIPLE ALARM/TROUBLE LED is on, multiple abnormal conditions (alarm, trouble, prealarm) exist on AE Board loops. The LJ Board displays one address at a time, beginning automatically with the address of the highest-priority device. An address remains displayed until a new, higher-priority device goes into an abnormal condition or until the PREVIOUS/NEXT switch is pushed. Use the PREVIOUS/NEXT switch to display other addresses as follows.

PRINTER/DISPLAY ASSEMBLY AND LH INTERFACE BOARD OPERATING INSTRUCTIONS

The two front Printer/Display Assembly switches are:
— Printer On-Line Switch with integral LED.
— Paper Advance Switch.

LH Interface Board switches are:

— ACK—UP to acknowledge indicated point in LCD display.
— ALL PT/ALM SUM—UP to request All Point Log; DOWN to request Alarm Summary Log.
— PREVIOUS/NEXT—UP to revert LCD display to former point; DOWN to advance LCD display to subsequent point.

FRONT PANEL SWITCHES/LEDS

Control Board Switches

ACKNOWLEDGE

— Pushing the ACKNOWLEDGE switch silences the local audible and changes blinking LEDs to ON. The ACKNOWLEDGE switch does not affect indicating zone outputs and does not silence alarm signals. Pushing the ACKNOWLEDGE switch acknowledges all signals present in the panel.
— If the panel is a DGP, the ACKNOWLEDGE switch does not function when the DGP is communicating with the higher-order system. The ACKNOWLEDGE switch becomes functional when communication is broken.

SILENCE

Pushing the SILENCE switch does the following:
— Silences devices connected to indicating zones.
— Silences devices connected to Control Modules with indicating characteristic set.
— Silences the local audible.
— Turns on the Control Board SILENCE LED.
— Changes blinking LEDs to on.

RESET

Pushing the RESET switch removes power to all initiating zones for fifteen seconds and sends out a fifteen-second reset signal that returns all input-zone status indicators to normal. After reset, zones that return to alarm or trouble are annunciated as new alarms or troubles.
PANEL TEST

Performing a Panel Test reveals whether all boards are controlled by the panel microprocessor. Pushing the PANEL TEST switch turns on all LEDs, except Communication Board LEDs and tones on the local audible. A Panel Test does not interrupt alarms or troubles reporting in the system.
Pushing the PANEL TEST switch turns on all LJ Communication/Display Board LEDs and causes the LJ Board to display the address table.

Pushing the MANUAL EVACUATION switch does the following:
— Turns on all indicating zones.
— Turns on all AE Board Control Modules that have the indicating characteristic set during system setup.
— Causes a common alarm indication.
— Causes the local audible to pulse.
Manual evacuation is terminated by pushing either the SILENCE or the RESET switch.
