Nowadays the noise control problem excites and attracts the attention of a great number of scientists in different disciplines. Indeed, noise control has a wide variety of applications in manufacturing, industrial operations, and consumer products. The main purpose of this book, organized in 13 chapters, is to present a comprehensive overview of recent advances in noise control and its applications in different research fields. The authors provide a range of practical applications of current and past noise control strategies in different real engineering problems. It is well addressed to researchers and engineers who have specific knowledge in acoustic problems. I would like to thank all the authors who accepted my invitation and agreed to share their work and experiences. Applied Multivariate Statistics for the Social Sciences, Fifth Edition James P.

Stevens, 2012-11-12. This best-selling text is written for those who use rather than develop statistical methods. Dr. Stevens focuses on a conceptual understanding of the material rather than on proving results. Helpful narrative and numerous examples enhance understanding, and a chapter on matrix algebra serves as a review. Annotated printouts from SPSS and SAS indicate what the numbers mean and encourage interpretation of the results. In addition to demonstrating how to use these packages, the author stresses the importance of checking the data, assessing the assumptions, and ensuring adequate sample size by providing guidelines so that the results can be generalized. The book is noted for its extensive applied coverage of MANOVA, its emphasis on statistical power, and numerous exercises, including answers to half. The new edition features new chapters on Hierarchical Linear Modeling (Ch 15) and Structural Equation Modeling (Ch 16). New exercises that feature recent journal articles to demonstrate the actual use of multiple regression (Ch 3), MANOVA (Ch 5), and repeated measures (Ch 13). A new appendix on the analysis of correlated observations (Ch 6). Expanded discussions on obtaining non-orthogonal contrasts in repeated measures designs with SPSS and how to make the identification of cell ID easier in log-linear analysis in 4 or 5 way designs. Updated versions of SPSS 15.0 and SAS 8.0 are used throughout the text and introduced in chapter 1. A book website with data sets and more. Ideal for courses on multivariate statistics found in psychology, education, sociology, and business departments, the book also appeals to practicing researchers with little or no training in multivariate methods. Prerequisites include a course on factorial ANOVA and covariance. Working knowledge of matrix algebra is not assumed.

Regression Modeling for Linguistic Data Morgan Sonderegger, 2023-06-06. The first comprehensive textbook on regression modeling for linguistic data offers an incisive conceptual overview along with worked examples that teach practical skills for realistic data analysis. In the first comprehensive textbook on regression modeling for linguistic data in a frequentist framework, Morgan Sonderegger provides graduate students and researchers with an incisive conceptual overview along with worked examples that teach practical skills for realistic data analysis. The book features extensive treatment of mixed effects regression models, the most widely used statistical method for analyzing linguistic data. Sonderegger begins with preliminaries to regression modeling: assumptions, inferential statistics, hypothesis testing, power, and other errors. He then covers regression models for non-clustered data, linear regression, model selection, and validation.

logistic regression and applied topics such as contrast coding and nonlinear effects The last three chapters discuss regression models for clustered data linear and logistic mixed effects models as well as model predictions convergence and model selection The book's focused scope and practical emphasis will equip readers to implement these methods and understand how they are used in current work The only advanced discussion of modeling for linguists Uses R throughout in practical examples using real datasets Extensive treatment of mixed effects regression models Contains detailed clear guidance on reporting models Equal emphasis on observational data and data from controlled experiments Suitable for graduate students and researchers with computational interests across linguistics and cognitive science **Traffic**
