Exploring Cats: Their Behaviors and Human-Cat Interactions Lynette Arnason Hart, Benjamin Hart, Emma Kathryn Grigg, Leslie Ann Lyons, Dennis Clair Turner, 2023-12-27 Cats exceed dogs in their numbers as companion animals in the U S and much of Europe despite them not filling working roles In the past their prowess as mousers on farms sometimes made them essential but these days many cats lead leisurely lives in people s homes What accounts for them becoming such appreciated family members What are their behaviors that are so enticing Exactly how do they respond to us When are they preferred companion animals more than dogs What do we know about cultural differences in views about cats Their growing popularity and the relative paucity of data about owned cats living in homes emphasizes the importance of monitoring their welfare The anthrozoological research literature on companion animals includes extensive studies of dogs while contributing relatively few close looks at the special behaviors and traits of domestic cats that make them so desirable as companions We know little about the dynamics of our interactions with cats and the attachment shared with them which may differ in some ways for those we have with dogs Nor have we identified the specific contexts where cats are particularly or uniquely compatible How does the type of attachment affect and shape the bond relationship between human and cat How are cats as emotional support animals for people with special needs especially autism What new information do we have about the cognitive abilities of domestic cats and how these abilities shape cats behavior and relationships with humans How do early life experiences of cats influence their behavior as adults or their successful integration into human households Do cats fit best in certain residential settings or with specific types or ages of people This Research Topic provides an opportunity to update our understanding on the special qualities and behaviors of cats and to scrutinize our mutual interactions with these companions

AI vs Humans Michael W. Eysenck, Christine Eysenck, 2021-12-30 The great majority of books on artificial intelligence are written by AI experts who understandably focus

on its achievements and potential transformative effects on society In contrast AI vs Humans is written by two psychologists Michael and Christine Eysenck whose perspective on AI including robotics is based on their knowledge and understanding of human cognition This book evaluates the strengths and limitations of people and AI The authors expertise equips them well to consider this by seeing how well or badly AI compares to human intelligence They accept that AI matches or exceeds human ability in many spheres such as mathematical calculations complex games e g chess Go and poker diagnosis from medical images and robotic surgery However the human tendency to anthropomorphise has led many people to claim mistakenly that AI systems can think infer reason and understand while engaging in information processing In fact such systems lack all those cognitive skills and are also deficient in the quintessentially human abilities of flexibility of thinking and general intelligence At a time when human commitment to AI appears unstoppable this up to date book advocates a symbiotic and co operative relationship between humans and AI It will be essential reading for anyone interested in AI and human cognition

Clinical Diagnosis of Mental Disorders Benjamin Wolman,2012-12-06 For centuries the treatment of mentally disturbed individuals was quite simple They were accused of collusion with evil spirits hunted and persecuted The last witch was killed as late as 1782 in Switzerland Mentally disturbed people did not fare much better even when the witchhunting days were gone John Christian Reil gave the following description of mental patients at the crossroads of the fifteenth and sixteenth centuries We incarcerate these miserable creatures as if they were criminals in abandoned jails near to the lairs of owls in barren canyons beyond the city gates or in damp dungeons of prisons where never a pitying look of a humanitarian penetrates and we let them in chains rot in their own excrement Their fetters have eaten off the flesh of their bones and their emaciated pale faces look expectantly toward the graves which will end their misery and cover up our shamefulfulness 1803 The great reforms introduced by Philippe Pinel at Bicetre in 1793 augured the beginning of a new approach Pinel ascribed the sick role and called for compassion and help One does not need to know much about those he wants to hurt but one must know a lot in order to help Pinel's reform was followed by a rapid development in research of causes symptoms and remedies of mental disorders There are two main prerequisites for planning a treatment strategy
