Handbook of Behavior, Food and Nutrition Victor R. Preedy, Ronald Ross Watson, Colin R. Martin, 2011-04-15 This book disseminates current information pertaining to the modulatory effects of foods and other food substances on behavior and neurological pathways and importantly vice versa. This ranges from the neuroendocrine control of eating to the effects of life-threatening disease on eating behavior. The importance of this contribution to the scientific literature lies in the fact that food and eating are an essential component of cultural heritage but the effects of perturbations in the food-cognitive axis can be profound. The complex interrelationship between neuropsychological processing, diet and behavioral outcome is explored within the context of the most contemporary psychobiological research in the area. This comprehensive psychobiology and pathology-themed text examines the broad spectrum of diet, behavioral and neuropsychological interactions from normative function to occurrences of severe and enduring psychopathological processes. **Feline Orthopaedics** Harry Scott, Juan M. Marti, Philip Witte, 2022-05-12 Cats are not referred to specialists as frequently as dogs, meaning the general practitioner must routinely treat cats that have been involved in road traffic accidents and other musculoskeletal trauma. This book is the first of its kind to provide a practical and user-friendly guide to feline orthopaedics. With a new author team led by RCVS Specialist in Small Animal Surgery Orthopaedics and Veterinary Neurology Harry Scott, the second edition has been thoroughly revised and updated. New chapters cover Physiotherapy and Oncology of the Feline Skeletal System. The book includes highly structured, fully referenced text that provides a concise, straightforward guide to the recognition and management of specific diseases and conditions. In this new edition, the neurological causes of lameness have been given more in-depth discussion with an emphasis on early recognition of clinical signs and diagnosis. The disorder sections are now divided into those likely to be associated with trauma (fractures and luxation) and those which are congenital or developmental. The text is supported by high-quality radiographs, colour photographs and colour line drawings to illustrate principles, techniques and procedures. Combining their experience in practice and education, the authors have produced a book that
