## **Decision Making Radioactive Disposal Routledge Management:**

**Decision-Making and Radioactive Waste Disposal** Gerry Nagtzaam, 2017-06-16 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year. Vital medical procedures, industrial processes and basic science research also produce significant quantities of waste. All of this waste must be shielded from the population for extended periods of time. Finding suitable locations for disposal facilities is beset by two main problems: community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making. *Decision making and Radioactive Waste Disposal* explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made. Five countries are featured: the US, Australia, Spain, South Korea and Switzerland. This book seeks to establish an understanding of the political, economic, environmental, legal and social dimensions of siting across those countries. This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts. The book will be of interest to students and scholars of environmental law, justice, management, politics, energy and security policy, as well as decision makers in government and industry.

*Decision-making and Radioactive Waste Disposal* Andrew Newman (Program officer), Gerry Nagtzaam, 2016 This book critically examines the phenomenon of low level radioactive waste (LLRW) disposal facility siting across four international democracies. The issue is of growing importance since World War II the level of this waste has increased from the hundreds to the billions.

*The Routledge Research Companion to Energy Geographies* Stefan Bouzarovski, Martin J Pasqualetti, Vanesa Castán Broto, 2017-07-06 Energy has become a central concern of many strands of geographical inquiry from global climate change to the effects of energy decisions on our lives. However many aspects of the black box of relationships at the energy-society interface remain unopened, especially in terms of the spatial underpinnings of energy production and consumption within nations, cities and regions. Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world. Providing an integrated perspective on the complex interdependencies between energy and geography, *The Routledge Research Companion to Energy Geographies* offers a timely conceptual framework to study the multiple facets of energy geography including security, space and place, planning, environmental science, economics and political science. Illustrating how a geographic approach towards energy can aid decision making pathways in the domains of social justice and environment, this book provides insights that will help move the international community toward greater cooperation, stability and sustainability.

**Governance of Radioactive Waste, Special Waste and Carbon Storage** Thomas Flüeler, 2023-04-05 This book demonstrates that the long term safety of nuclear waste repositories, special waste disposal and carbon storage (CCS) is highly challenging and monitoring may contribute to substantiate evidence support decision making.

and legitimise the programme Deep geological disposal is a long term safety issue and in parallel requires long term institutional involvement of the technoscientific community waste producers public administrators NGOs and the public What where and when to monitor is determined by its goal setting It may be operational confirmatory in the near field or environmental far field Strategic monitoring as proposed here contributes to process implementation or policy and institutional surveillance It not only addresses the controversial long lasting problem of nuclear other toxic or CO2 waste but investigates some ways to approach for solutions or solution spaces not just technical but also institutional societal and personal It includes the tailored transfer of knowledge concept and system understanding experience and documentation to specific audiences above It is an integrative tool of targeted yet adaptive management and may be applicable to other long term sociotechnical fields

### **Costing Methods and Funding Schemes for Radioactive Waste Disposal Programmes**

IAEA,2020-11-11 Reliable methods for estimating the cost of a radioactive waste disposal programme are crucial to ensure that the necessary funding for completing the disposal programme is available Estimating the cost for disposal is however a challenging and complex task Disposal programmes themselves are complex and long term undertakings and conditions can be expected to change significantly over the time span during which a disposal programme is developed and implemented This publication provides Member States with information on developing cost estimates for a disposal programme and establishing funding mechanisms It will help readers in becoming informed clients by familiarizing themselves with the approaches and complexities in cost estimates and funding mechanisms for disposal The publication is applicable to all waste categories and both near surface and geological disposal It contains relevant examples and case studies from national programmes The cost figures are intended to give an indication of the possible cost of certain parts or aspects of the disposal programme rather than to compare different disposal programmes costs

### **Challenges of Nuclear Waste Governance**

Achim Brunnengräber,Maria Rosaria Di Nucci,Ana María Isidoro Losada,Lutz Mez,Miranda A. Schreurs,2018-03-17 This is volume two of a comparative analysis of nuclear waste governance and public participation in decision making regarding the storage and siting of high level radioactive waste and spent fuel in different countries The contributors examine both the historical and current approaches countries have taken to address the wicked challenge of nuclear waste governance The analyses discuss the regulations technology choices safety criteria costs and financing issues compensation schemes institutional structures and approaches to public participation found in each country

Andrew Newman,Gerry Nagtzaam,2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year Vital medical procedures industrial processes and basic science research also produce significant quantities of waste All of this waste must be shielded from the population for extended periods of time Finding suitable locations for disposal facilities is beset by two main problems community responses to siting proposals are generally antagonistic and as a result governments

have tended to be reactive in their policy making Decision making and Radioactive Waste Disposal explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made Five countries are featured the US Australia Spain South Korea and Switzerland This book seeks to establish an understanding of the political economic environmental legal and social dimensions of siting across those countries This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts The book will be of interest to students and scholars of environmental law justice management politics energy and security policy as well as decision makers in government and industry *Conflicts, Participation and Acceptability in Nuclear Waste Governance* Achim Brunnengräber, Maria Rosaria Di Nucci, 2019-07-12 This book is the last part of a trilogy and concludes a long term project that focussed on nuclear waste governance in 24 countries It deals with core themes of the disposal of high level radioactive waste HLW e.g. the wicked problems of housing nuclear waste disposal facilities public participation and public discourse voluntarism and compensation in siting as well as the role of advisory bodies and commissions The volume reflects on the diverse factors that shape the debate on what can be considered an acceptable solution and on various strategies adopted in order to minimise conflicts and possibly increase acceptability The various theoretical and empirical contributions shed light on several mechanisms and issues touched upon in these strategies such as the role of trust voluntarism economic interests at stake compensation ethics governance and participation Decision Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution **Nuclear Waste Politics** Matthew Cotton, 2017-07-14 The question of what to do with radioactive waste has dogged political administrations of nuclear powered electricity producing nations since the inception of the technology in the 1950s As the issue rises to the forefront of current energy and environmental policy debates a critical policy analysis of radioactive waste management in the UK provides important

insights for the future Nuclear Waste Politics sets out a detailed historical and social scientific analysis of radioactive waste management and disposal in the UK from the 1950s up to the present day drawing international comparisons with Sweden Finland Canada and the US A theoretical framework is presented for analysing nuclear politics blending literatures on technology policy environmental ethics and the geography and politics of scale The book proffers a new theory of ethical incrementalism and practical policy suggestions to facilitate a fair and efficient siting process for radioactive waste management facilities The book argues that a move away from centralised high capital investment national siting towards a regional approach using deep borehole disposal could resolve many of the problems that the high stakes inflexible megaproject approach has caused across the world This book is an important resource for academics and researchers in the areas of environmental management energy policy and science and technology studies *Handbook for Environmental Risk Decision Making* C. Richard Cothorn, 2019-07-17 This handbook describes the broad aspects of risk management involving scientific policy judgment uncertainty analysis perception considerations statistical insights and strategic thinking This book presents all the important concepts to enable the reader to see the big picture This ability is extremely important it allows the decision maker or strategic environmental planner to understand and cope with a wide variety of complex and interlinked pieces of information and data The text presents environmental problems and whenever applicable the methodology required to reach a successful solution Decisions and policies are examined The book covers numerous objective and subjective components of environmental risk decision making It details quantitative and comparative risk and investigates the cost and feasibility of different decisions Social pressures safety and political religious ethical and psychological issues are addressed How to evaluate the potential impact on the quality of life also is discussed Any company doing risk assessment risk management or risk communication as well as those doing environmental decision making will find this reference to be invaluable It is also suitable as a text for courses in environmental management environmental science and risk assessment in the areas of risk management and strategic environmental planning Nuclear Energy Regulation, Risk and The Environment Abdullah Al Faruque, 2018-09-21 Analyzing the impact and benefits of nuclear energy on environment this book examines nuclear treaties in relation to environmental protection highlights legal framework on non proliferation and denuclearization explores treaties on nuclear safety and nuclear security discusses legal regimes on management of nuclear wastes assesses the third party liability regime and discusses the role of IAEA EURATOM and NEA in regulating nuclear energy It explores nuclear energy in the context of climate change and sustainable development This book also examines the international legal framework on notification assistance and emergency preparedness in the event of nuclear accidents considers legal aspects of decommissioning of nuclear power plants and main legislative trends on nuclear energy use in selected countries It also addresses regulatory responses to nuclear energy in the wake of the Fukushima power plant nuclear accident in Japan **Geological Repository Systems for Safe Disposal of Spent Nuclear Fuels and**

**Radioactive Waste** Michael J Apted, Joonhong Ahn, 2017-05-25 Geological Repository Systems for Safe Disposal of Spent Nuclear Fuels and Radioactive Waste Second Edition critically reviews state of the art technologies and scientific methods relating to the implementation of the most effective approaches to the long term safe disposition of nuclear waste also discussing regulatory developments and social engagement approaches as major themes Chapters in Part One introduce the topic of geological disposal providing an overview of near surface intermediate depth and deep borehole disposal spanning low medium and high level wastes Part Two addresses the different types of repository systems crystalline clay and salt also discussing methods of site surveying and construction The critical safety issue of engineered barrier systems is the focus of Part Three with coverage ranging from nuclear waste canisters to buffer and backfill materials Lastly Parts Four and Five focus on safety security and acceptability concentrating on repository performance assessment then radiation protection environmental monitoring and social engagement Comprehensively revised updated and expanded with 25% new material on topics of current importance this is the standard reference for all nuclear waste management and geological repository professionals and researchers Contains 25% more material on topics of current importance in this new comprehensive edition Fully updated coverage of both near surface intermediate depth and deep borehole disposal in one convenient volume Goes beyond the scientific and technical aspects of disposal to include the political regulatory and societal issues involved all from an international perspective

**Socioeconomic Evaluation of Megaprojects** Markku Lehtonen, Pierre-Benoît Joly, Luis Aparicio, 2016-11-22 The governance and evaluation of megaprojects that is large scale complex high stakes infrastructure projects usually commissioned by governments and delivered through partnerships between public and private organisations is receiving increased attention However megaproject evaluation has hitherto largely adopted a linear rationalist perspective to explain the frequent failure of such projects to meet the iron triangle of performance criteria delivering on time within budget and according to specifications This approach recommends greater control and accountability to remedy megaproject pathologies Drawing on empirical examples mainly from the transport sector and radioactive waste disposal this book offers new perspectives to megaproject evaluation Comprising contributions from leading experts in project evaluation and appraisal this collection opens up new avenues by suggesting two ways of improving megaproject evaluation 1 approaches that go beyond the dominant linearrationalist notion of policy processes and emphasise instead the objective of opening up appraisal processes in order to enhance learning and reflexivity and 2 approaches that extend evaluative criteria beyond the iron triangle to cover the various socioeconomic impacts and preconditions for project success This volume will be of great relevance to scholars and practitioners with an interest in megaprojects energy and climate policy radioactive waste management urban design and project planning and management

The Future of Radioactive Waste Governance Maarten Arentsen, Rinie van Est, 2023-04-06 This Open Access book examines the radioactive waste management policies of ten European countries Belgium Finland France Germany Italy the

Netherlands Spain Sweden Switzerland and the United Kingdom Most countries are in the process of planning and creating final storage solutions while none has yet finalized this process Over the past decades many countries have been renewing their decision making processes and the institutions that support them The book provides 16 lessons that may advance the future democratic decision making process around radioactive waste management *Disposal of All Forms of Radioactive Waste and Residues* Michael Lersow, Peter Waggitt, 2019-11-16 This book describes repository solutions for all types of radioactive waste and residues in different geotechnical repository structures The focus is initially on existing or planned final disposal sites in Germany and the process of finding sites However international comparisons are drawn especially to locations in the US This affects both the repository structures and the legal requirements The radioactive substances considered include residues from uranium ore processing as well as low and intermediate level radioactive waste up to heat generating high level radioactive wastes such as spent fuel and vitrified waste from reprocessing In order to evaluate the repository structures and their inventories a dimensionless radiotoxicity index  $A_i F_i$  activity of radionuclide quantity  $A_i$  related to the exemption limit of radionuclide  $F_i$  has been introduced This gives the reader a well founded overview of the degree of inconsistency in the handling of safety requirements for the respective geotechnical environmental structures This creates the necessary transparency on this issue which has not been previously available and is required by stakeholders today The long term security the duration of the observation period and the certainty of the safety prognosis are also discussed in the book as well as the participation of subsequent generations in current and possible future repositories This is vital as nuclear energy will continue to be used worldwide in the long term The international repository projects presented have all been subjected to the same evaluation criteria This applies both to existing operational project as well as those about to be commissioned and the processes for seeking locations Special attention has been paid to monitoring both operational and long term monitoring This broad range of topics makes this book a very valuable read for both the interested public and the professional world **Ethics and Technology Assessment: A Participatory Approach** Matthew Cotton, 2014-06-11

Whether it is nuclear power geo engineering or genetically modified foods the development of new technologies can be fraught with complex ethical challenges and political controversy which defy simple resolution In the past two decades there has been a shift towards processes of Participatory Technology Assessment designed to build channels of two way communication between technical specialists and non expert citizens and to incorporate multiple stakeholder perspectives in the governance of contentious technology programmes This participatory turn has spurred a need for new tools and techniques to encourage group deliberation and capture public values moral and choices This book specifically examines the ethical dimensions of controversial technologies and discusses how these can be evaluated in a philosophically robust manner when the ones doing the deliberating are not ethicists legal or technical experts Grounded in philosophical pragmatism and drawing upon empirical work in partnership with citizen stakeholders this book presents a model called

Reflective Ethical Mapping a new meta ethical framework and toolbox of techniques to facilitate citizen engagement with technology ethics      **Radioactive Waste** Frans Berkhout,2003-10-04 This analysis of nuclear strategy the politics of nuclear power and the shifting emphasis of government regulation redefines the issue of radwaste management and sets it at the centre of the current debate about the environment      Effective Risk Communication Joseph Arvai,Louie Rivers

III,2013-10-30 There are two questions often asked of risk communication what has been learned from past work and what is needed to push the field forward Drawing on the experience of leading risk researchers and practitioners Effective Risk Communication focuses on answering these questions The book draws together new examples of research and practice from contexts as diverse as energy generation human health nuclear waste climate change food choice and social media This book treats risk communication as much more than the interchange of risk information between experts and non experts rather it aims to emphasise the diversity in viewpoints and practices In each specially commissioned chapter the authors reflect on the theoretical and applied underpinnings of their best projects and comment on how their approach could be used effectively by others Building upon each other the chapters will provoke new discussion and action around a discipline which many feel is neither meeting important needs in practice nor living up to its potential in research Through a more careful examination of the work already done in risk communication the book will help develop better more reflective practice for the future

**One Hundred Centuries Of Solitude** James Flynn,James Chalmers,Doug Easterling,Roger Kasperson,Howard Kunreuther,2019-06-04 Time is both the ally of high level nuclear waste HLNW managers and the enemy It is the ally because the radioactivity in elements and isotopes decreases with age making the waste progressively less dangerous to human health and safety and the environment This rate of radioactive decline varies in some cases diminishing by half the half life in seconds minutes hours days weeks months or years In other cases the decay process takes centuries or hundreds of thousands of years before the wastes are safe for human contact The problem as now conceptualized for HLNW managers is simple to state if not easy to achieve The HLNW needs to be secured in some fashion until it decays by virtue of its physical nature to safe levels Another possible future solution not currently available might be to change the ructure of HLNW through high technology processing and thus decompose the waste into units with different and less lengthy radioactivity Learning whether this processing is a future option will require patience and generous amounts of time for research
