Decision Science Theory And Applications Mansholt Publication Series:

Decision Science Th. H. B. Hendriks, 2007 Decision science is the discipline that is concerned with the development and applications of quantitative methods and techniques to support decision making processes This extensively revised edition of two former versions of the book discusses the general principles and often used optimization techniques such as linear programming integer programming dynamic programming non linear programming network theory simulation and stochastic programming This book aims to fill in the gap between theory and practice It discusses the theoretical background of important quantitative methods and techniques as well as how they can be applied to practical decision making problems Therefore the modeling process is illustrated with examples of firms consumers governments and other non profit organizations in agriculture related sectors The authors have used their vast didactical experience to find a proper balance between mathematical exactness knowledge and readability on the one hand and offer understanding insights and applicability of the subjects on the other hand The book is therefore an essential asset in introductory courses on decision science in undergraduate postgraduate and research programmes

Lami, 2014-07-26 Eurocorridors are characterized by intensive transport flows and dynamic patterns of establishment and household locations They are also considered the backbones of powerful spatial and economic forces in the areas that connect urban regions One of the main difficulties in the spatial planning of eurocorridors has been the need to engage in different types of collective action Such an approach can be extremely challenging in practice useful to researchers in the field and to professionals as well In the light of this the book's main objectives are To define the problem by analyzing the key features which include freight and passenger transport policies and issues the territorial context with its geographical social economic and cultural aspects the plurality of subjects with different aims and resources and the lack of homogeneous information To illustrate assessment models and evaluation frameworks MCDA Discrete Choice Analysis Collaborative Assessments Geovisualization Technologies
