Introduction to Manufacturing Michel Baudin, Torbjørn Netland, 2022-12-27 This Introduction to Manufacturing focuses students on the issues that matter to practicing industrial engineers and managers. It offers a systems perspective on designing, managing, and improving manufacturing operations. On each topic, it covers the key issues with pointers on where to dig deeper. Unlike the many textbooks on operations management, supply chain management, and process technology, this book weaves together these threads as they interact in manufacturing. It has five parts: Getting to Know Manufacturing: Fundamental concepts of manufacturing as an economic activity from manufacturing strategy to forecasting market demand; Engineering the Factory: Physical design of factories and processes, the necessary infrastructure, and technology for manufacturing; Making Information Flow: The central nervous system that triggers and responds to events occurring in production; Making Materials Flow: The logistics of manufacturing from materials handling inside the factory via warehousing to supply chain management; Enhancing Performance: Managing manufacturing performance and methods to maintain and improve it both in times of normal operations and emergencies. Supported with rich illustrations and teaching aids, Introduction to Manufacturing is essential reading for industrial engineering and management students of all ages and backgrounds engaged in the vital task of making the things we all use.

Integrative Production Technology Christian Brecher, Denis Özdemir, 2017-01-09 This contributed volume contains the research results of the Cluster of Excellence Integrative Production Technology for High Wage Countries, funded by the German Research Society DFG. The approach to the topic is genuinely interdisciplinary, covering insights from fields such as engineering, material sciences, economics, and social sciences. The book contains coherent deterministic models for integrative product creation chains as well as harmonized cybernetic models of production systems. The content is structured into five sections: Integrative Production Technology; Individualized Production; Virtual Production Systems; Integrated Technologies; Self-Optimizing Production Systems and Collaboration Productivity. The target audience primarily comprises research experts and practitioners in the field of production engineering, but the book may also be beneficial for graduate students.

Energy Efficient Manufacturing John W. Sutherland, David A. Dornfeld, Barbara S. Linke, 2018-07-04 Over the last several years manufacturers have expressed increasing interest in reducing their energy consumption and have begun to search for opportunities to reduce their energy usage In this book the authors explore a variety of opportunities to reduce the energy footprint of manufacturing These opportunities cover the entire spatial scale of the manufacturing enterprise from unit process oriented approaches to enterprise level strategies Each chapter examines some aspect of this spatial scale and discusses and describes the

opportunities that exist at that level Case studies demonstrate how the opportunity may be acted on with practical guidance on how to respond to these opportunities Production at the Leading Edge of Technology Welf-Guntram Drossel,Steffen Ihlenfeldt,Martin Dix,2025-08-22 This book contains all contributions to the congress in which both detailed scientific investigations and technological innovations in the process chains of machining and forming are discussed as well as comprehensive far sighted overall views on the planning and control of production processes These approaches are supplemented by more interdisciplinary cross sectional topics such as robotics control engineering automation materials technology additive manufacturing and human centered production It is particularly striking that the main approaches presented aim to improve efficiency in production using data driven methods such as machine learning and artificial intelligence However the use of measurement results to improve simulations is also frequently addressed The book proceedings show that transformations can only succeed through the realization of both detailed technical improvements in production technologies and optimized production organization A Manual for Instructors in Civilian Conservation Corps Camps United States.
