Fast Track to MDX Mark Whitehorn, Robert Zare, Mosha Pasumansky, 2007-12-29 IloveBusinessIntelligence
IloveBIbecauseitisallaboutbecomingbetter BI is all about empowering us with knowledge and that knowledge is the power to realize our full potential As Zorge the spy said knowledge is power and who doesn't love to have the power to know to understand and to make intelligent decision I do Since the dawn of the modern information system it was obvious that the information accumulated in the machine is wasted if there is no way to analyze it and learn from it From as early as the 1950s data analysis systems and later decision support systems were designed developed and deployed with that intent However only in the last decade have these systems become both reasonably affordable and mainstream and their business impact indisputable The last decade has also seen the emergence of OLAP as the centerpiece of the BI technologies The OLAP multidimensional databases combine incredible performance with unsurpassed analytical power and in my opinion are the foundation of the BI platform While the performance differences between the multidimensional databases and the traditional relational databases are very significant Moore's law which states that the hardware computing power doubles every 18 months renders this advantage of the OLAP databases temporary Sooner or later the raw computing power of the common server machines will be sufficient to provide the performance needed for sophisticated analysis even when the data is stored in a relational database

Data Warehouse Systems Alejandro Vaisman, Esteban Zimányi, 2014-09-10 With this textbook Vaisman and Zimányi deliver excellent coverage of data warehousing and business intelligence technologies ranging from the most basic principles to recent findings and applications To this end their work is structured into three parts Part I describes Fundamental Concepts including multi dimensional models conceptual and logical data warehouse design and MDX and SQL OLAP Subsequently Part II details Implementation and Deployment which includes physical data warehouse design data extraction transformation and loading ETL and data analytics Lastly Part III covers Advanced Topics such as spatial data warehouses trajectory data warehouses semantic technologies in data warehouses and novel technologies like Map Reduce column store databases and in memory databases As a key characteristic of the book most of the topics are presented and illustrated using application tools Specifically a case study based on the well known Northwind database illustrates how the concepts presented in the book can be implemented using Microsoft Analysis Services and Pentaho Business Analytics All chapters are summarized using review questions and exercises to support comprehensive student learning Supplemental material to assist instructors using this book as a course text is available at <http://cs.ulb.ac.be/DWSDIbook> including electronic versions of the figures solutions to all exercises and a set of slides accompanying each chapter Overall students practitioners and researchers alike will find this book the most comprehensive reference work on data warehouses with key topics described in a clear and educational style
