Fatal Tradeoffs W. Kip Viscusi, 1992-08-13 Ideally it would be desirable if we could all adopt a high minded commitment to a risk free existence Unfortunately such an objective is beyond our reach politicians who advocate higher taxes rarely get elected and economists who indicate that our resources are limited are often portrayed as purveyors of pessimism Fatal Tradeoffs culminates and synthesizes the research of the government's expert on the value of life and risk regulation Viscusi's work in the social regulation of risk this volume covers topics relating to the value and empirical estimates of life the rationality of individual responses to risk and the role of government policy In addition to a careful selection of his writings Fatal Tradeoffs includes a new survey of the value of life literature a review of the 1980s regulatory reforms and guidelines for risk policy Balanced with case studies the more technical articles have been opened to include policy ramifications making the text accessible to professionals and academics alike

Law and the Contradictions of the Disability Rights Movement Samuel R. Bagenstos, 2009-06-23 The passage of the Americans with Disabilities Act in 1990 was hailed as revolutionary legislation but in the ensuing years restrictive Supreme Court decisions have prompted accusations that the Court has betrayed the disability rights movement The ADA can lay claim to notable successes yet people with disabilities continue to be unemployed at extremely high rates In this timely book Samuel R Bagenstos examines the history of the movement and discusses the various often conflicting projects of diverse participants He argues that while the courts deserve some criticism some may also be fairly aimed at the choices made by prominent disability rights activists as they crafted and argued for the ADA The author concludes with an assessment of the limits of antidiscrimination law in integrating and empowering people with disabilities and he suggests new policy directions to make these goals a reality

Of Risks and Normative Responses Christina Anikó Simmig, 2023-09-23 Disaster losses in the context of natural hazards continue to rise despite a growing understanding of disaster risks and measures to reduce them One obstacle to enhancing private and public disaster risk reduction is the influence of the distorted risk perception of laypeople The book argues for the necessity of public regulations and explores means to mitigate the consequences of such distorted risk perception through legal measures and adjustments to political decision making in Council of Europe member states while respecting the value of autonomy and democratic principles In terms of collective decision making the book advocates for the implementation of deliberative fora in the democratic decision making process to mitigate the influence of distorted risk perception associated with natural hazards Additionally the book discusses a range of disaster risk reducing measures that member states may lawfully implement to protect individuals and communities from the consequences of distorted risk perceptions related to common natural hazards To underscore the merits of strengthening disaster risk

reduction from the bottom up this book demonstrates how fundamental rights and democratic values impede attempts to increase DRR from the top down even in cases where people's risk perceptions are distorted In doing so the book addresses the issue of disaster risk reduction in a novel way by exposing how legal and political barriers to disaster loss reduction can be overcome by giving higher priority to mitigating distorted risk perceptions
