This study explores the theoretical relationship between Aristotle s theory of syllogism and his conception of demonstrative knowledge More specifically I consider why Aristotle s theory of demonstration presupposes his theory of syllogism In reconsidering the relationship between Aristotle s two Analytics I modify this widely discussed question The problem of the relationship between Aristotle s logic and his theory of proof is commonly approached from the standpoint of whether the theory of demonstration presupposes the theory of syllogism By contrast I assume the theoretical relationship between these two theories from the start This assumption is based on much explicit textual evidence indicating that Aristotle considers the

theory of demonstration a branch of the theory of syllogism I see no textual reasons for doubting the theoretical relationship between Aristotle's two Analytics so I attempt to uncover here the common theoretical assumptions that relate the syllogistic form of reasoning to the cognitive state i.e. knowledge which is attained through syllogistic inferences This modification of the traditional approach reflects the wider objective of this essay Unlike the traditional interpretation which views the Posterior Analytics in light of scientific practice this study aims to lay the foundation for a comprehensive interpretation of the Posterior Analytics considering this work from a metaphysical perspective One of my major assertions is that Aristotle's conception of substance is essential for a grasp of his theory of demonstration in general and of the role of syllogistic logic in particular

**Europe Managing the Crisis** Walter Kickert,Tiina Randma-Liiv,2015-06-05 Studies of the recent financial crisis have been largely dominated by economists but the similarities and differences between European countries response reflect both economic and political perspectives which have resulted in considerable differences in their decisions Drawing on uniquely comprehensive research data this book presents an in depth comparative analysis of how 14 European governments tackled the challenge of fiscal consolidation and analyses the political decision making behind these measures By exploring national responses not just in fiscal terms but also from a political perspective it reveals that decision making has been driven by political factors with profound effects on public administration and management This ground breaking book fills an important gap in the research literature for scholars of public management public administration and policy and will be a benchmark for future work on the global economic crisis
