CORP 2012 - Proceedings/Tagungsband Manfred Schrenk, Peter Zeile, Vasily V. Popovich, Pietro Elisei, 2012 *RE MIXING THE CITY Towards Sustainability and Resilience* There is nothing permanent except change. Heraclitus. Cities worldwide are facing rapid social, economic, environmental, technological, and cultural changes such as rapid urbanisation, aging of society, security issues, housing emergency, new solutions on mobility, integration of immigrants, food and water shortage, etc. Especially in times of economic crisis and demographic changes in cities, it is necessary to think about how to best handle what we have and therefore *RE MIXING THE CITY* is a challenge to manage and recombine the elements which make our modern cities in order to better respond to change.

Developing an Appropriate Contaminated Land Regime in China Xiaobo Zhao, 2019-08-27 This book explores the complex package of mechanisms used to identify, record, manage, and remediate contaminated land, including the system for allocating liabilities that has been set up by China's contaminated land law and accompanying administrative decrees and environmental standards. Statutory control of soil or land contamination is a comparatively new phenomenon for Chinese lawmakers and researchers. After more than ten years of preparation, China recently adopted its first nationwide contaminated land law, the Law of the People's Republic of China on the Prevention and Control of Soil Contamination, which entered into effect in the beginning of 2019. The law deals exclusively with risk management in connection with soil contamination and the remediation of contaminated land. This book analyzes various

facets of how China is managing the risks associated with soil contamination and remediating contaminated sites by means of legislation Chapters 1 and 2 reveal the current extent of the soil contamination problem in China and the initial policy responses of the country's central government In turn Chapters 3 and 4 address the regulatory frameworks and the latest contaminated land legislation at both the local and national level Lastly Chapters 5 through 9 offer concrete recommendations based on lessons learned in the US and UK for reforming contaminated land management in China Overall the book covers the past present and future of contaminated land management in China making it of interest to environmental policymakers administrators academics lawyers and engineers engaged in soil or environmental protection Further it offers a source of reliable information for those who want to learn more about China's environmental legislation and contaminated land management policy
