A Unified Theory of Information Design Nicole Amare, Alan Manning, 2016-11-03 Communicative visuals including written text have a diverse range of forms and purposes In this volume the authors show that it is possible to both describe and explain the major properties of diverse visual communication forms and purposes within a common theoretical framework of information design and ethics For those unaccustomed to thinking of written text as a visual form belonging to the same general class as other visual forms colour texture shape imagery etc consider how a text's readability suffers if we remove all white space and punctuation which can be identified as visual signals of the same subtype as grid lines and bullet points dividing and calling attention to adjacent

information The authors identify deep connections between foundational visual design elements and the grammar of language itself No physicist or chemist today questions the value of a single theory that describes and explains a wide variety of phenomena but oddly enough the authors have frequently been asked why they are interested in advancing a unified theory of visual communication The simplest answer is to treat visual communication as a science and seeking unified theories is just what science does In more practical terms a unified approach to visual communication allows us to teach visual design students relatively few things that will enable them to do relatively many things
