Reeder and Felson's Gamuts in Radiology Maurice M. Reeder, 2013-04-17 by Elias G Theros M D I Meschan Distinguished Professor of Radiology Wake Forest University Medical Center Winston Salem North Carolina USA Amongst the present generation of radiologists beguiled by the glamour and excitement of the new high tech imaging and interventional modalities too few have developed a strong sense of differential diagnosis based on radiologic pattern recognition and its correlation with clinical and laboratory findings There is no question about the incredible contribution by the new modalities to our diagnostic armamentarium but in the evolution of modern day radiologic practice the cognitive element has been neglected and our abilities as diagnosticians have suffered The advent of this third edition of Reeder and Felson's Gamuts in Radiology is timely and welcome As always use of the gamut lists will help evoke differential thinking and this has been enhanced by the addition of over 250 new gamuts as well as by the updating of over three fourths of the existing gamuts Interestingly about 130 of the new gamuts are MRI Gamuts developed by Dr William Bradley whose enormous experience in clinical MRI has prepared him to think differentially about look alike patterns and or locations of lesions displayed by this modality This is an important step forward in the use of this remarkable new diagnostic tool

Sperber, 2012-12-06 Prior to the virtual atomic explosion of medical knowledge at a time when communication was very much slower a medical book to be authoritative and believable had to be written by a very knowledgeable and per force usually quite senior person The choice of texts was limited and tended to be dominated by a few classic a phrase not quite synonymous with dogma Following the information explosion the scenario is quite different Not only is there a geometric progression in the quantity and speed of development of new medical knowledge but also this development is occurring at very different rates in different countries This is particularly true in medical imaging The result is that it is now virtually

impossible to produce a single author book that can cover the field or even a subdivision of it This absolute requirement for multiple authors has in turn created the need for a new type of editor author who must be multinational in approach have a uniquely informed appreciation of what is going on in medical imaging research throughout the entire world and possess the depth of personal knowledge and experience to judge correctly what work is the most rigorous and likely to have the greatest impact
