Conjuring Science : Scientific Symbols and Cultural Meanings in American Life Christopher P. Toumey, 1996

Conjuring Science Sofie Lachapelle, 2015-10-07 *Conjuring Science* explores the history of magic shows and scientific entertainment. It follows the frictions and connections of magic and science as they occurred in the world of popular entertainment in France from the mid eighteenth to the early twentieth century. It situates conjurers within the broader culture of science and argues that stage magic formed an important popular conduit for science and scientific enthusiasm during this period. From the scientific recreations of the fairs to the grand illusions of the theatre stage and the development of early cinema, conjurers used and were inspired by scientific and technological innovations to create illusions that provoke a sense of wonder and often even instruct their audience. In their hands, science took on many meanings and served different purposes: it was a set of pleasant facts and recreational demonstrations upon which to draw; it was the knowledge presented in various scientific lectures accompanied by optical projections; at magic shows, it was the techniques necessary to create illusions and effects on stage and later on at the cinema; and it was a way to separate conjuring from the deceit of mediums, mystical showmen and quacks in order to gain a better standing within an increasingly scientifically minded society.

Science Studies David J. Hess, 1997-10 The first comprehensive survey of the nascent field of science studies. Thrust into the public eye by the contentious Science Wars played out most recently by physicist Alan Sokal's hoax, the nascent field of science studies takes on the political, historical and cultural dimensions of technology and the sciences. *Science Studies* is the first comprehensive survey of the field combining a concise overview of key concepts with an original and integrated framework. In the process of bringing disparate fields together under one tent, David J. Hess realizes the full promise of science studies long uncomfortably squeezed into traditional disciplines. He provides a clear discussion of the issues and misunderstandings that have arisen in these interdisciplinary conversations. His survey is up to date and includes recent developments in philosophy, sociology, anthropology, history, cultural studies and feminist studies. By moving from the discipline-bound blinders of a sociology, history, philosophy or anthropology of science to a transdisciplinary field, science studies, Hess argues, will be able to provide crucial conceptual tools for public discussions about the role of science and technology in a democratic society.

Voodoo Science Robert L. Park, 2002 Occasionally in the world of science unexpected results that appear to violate accepted laws of nature can herald revolutionary advances in human knowledge. Many of these revolutionary discoveries do, however, turn out to be wrong, and eminent scientists must carry the burden of a tarnished reputation for mistakenly thinking they have made a great discovery. In this entertaining text, Robert Park examines the social, economic and political forces that elicit or support flawed or fake science and then go on to sustain it in the face of often overwhelming contrary evidence. Readers are made aware of the fine line that exists between foolishness and fraud and are warned against irrational beliefs dressed up as scientific garb.

Indigo Plantations and Science in Colonial India

Prakash Kumar,2012-08-27 Prakash Kumar documents the history of agricultural indigo exploring the effects of nineteenth century globalization on a colonial industry in South Asia Kumar discusses how the knowledge of indigo culture thrived among peasant traditions on the Indian subcontinent in the early modern period Caribbean planters and French naturalists then developed and codified this knowledge into widely disseminated texts European planters who began to settle in Bengal with the establishment of British rule in the third quarter of the eighteenth century drew on this network of information Through the nineteenth century indigo culture in Bengal became more modern science based and expert driven When a cheaper and purer synthetic indigo was created in 1897 the planters and the colonial state established laboratories to find ways to cheapen the cost of the agricultural dye and improve its purity This indigo science crossed paths with the colonial state s effort to develop a science for agricultural development For two decades natural indigo survived the competition of the industrial substitute The indigo industry s optimism faded only at the end of the First World War when German proprietary knowledge of synthetic indigo became widely available and the industrial use of synthetic indigo for textile dyeing and printing became almost universal

Civilization and the Culture of Science Stephen Gaukroger,2020-02-19 How did science come to have such a central place in Western culture How did cognitive values and subsequently moral political and social ones come to be modelled around scientific values In Civilization and the Culture of Science Stephen Gaukroger explores how these values were shaped and how they began in turn to shape those of society The core nineteenth and twentieth century development is that in which science comes to take centre stage in determining ideas of civilization displacing Christianity in this role Christianity had provided a unifying thread in the study of the world however and science had to match this which it did through the project of the unity of the sciences The standing of science came to rest or fall on this question which the book sets out to show in detail is essentially ideological not something that arose from developments within the sciences which remained pluralistic and modular A crucial ingredient in this process was a fundamental rethinking of the relations between science and ethics economics philosophy and engineering In his engaging description of this transition to a scientific modernity Gaukroger examines five of the issues which underpinned this shift in detail changes in the understanding of civilization the push to unify the sciences the rise of the idea of the limits of scientific understanding the concepts of applied and popular science and the way in which the public was shaped in a scientific image
