Calculus of Variations and Geometric Evolution Problems F. Bethuel, G. Huisken, S. Mueller, K. Steffen, 2006-11-14 The international summer school on Calculus of Variations and Geometric Evolution Problems was held at Cetraro Italy 1996 The contributions to this volume reflect quite closely the lectures given at Cetraro which have provided an image of a fairly broad field in analysis where in recent years we have seen many important contributions Among the topics treated in the courses were variational methods for Ginzburg Landau equations variational models for microstructure and phase transitions a variational treatment of the Plateau problem for surfaces of prescribed mean curvature in Riemannian manifolds both from the classical point of view and in the setting of geometric measure theory *Calculus* Abraham Ginzburg, 1963

Boundary Value Problems and Fourier Expansions Charles R. MacCluer, 2013-01-18 Based on modern Sobolev methods this text integrates numerical methods and symbolic manipulation into an elegant viewpoint that is consonant with implementation by digital computer 2004 edition Includes 64 figures Exercises Statistical and Inductive Probabilities Hugues Leblanc, 2012-01-27 This treatment addresses a decades old dispute among probability theorists asserting that both statistical and inductive probabilities may be treated as sentence theoretic measurements and that the latter qualify as estimates of the former 1962 edition **Pursuit Games** Otomar Hajek, 2008-01-01 A presentation of systematic methods for winning differential games of pursuit and evasion this volume explores the procedures scope and applications Numerous examples illustrate basic and advanced concepts including capture strategy and algebraic theory Detailed proofs appear throughout the text along with 200 exercises that further clarify each subject 1975 edition **Singularities in PDE and the Calculus of Variations** Stanley Alama, Lia Bronsard, Peter J. Sternberg, This book contains papers presented at the Workshop on Singularities in PDE and the Calculus of Variations at the CRM in July 2006 The main theme of the meeting was the formation of geometrical singularities in PDE problems with a variational formulation These equations typically arise in some applications to physics engineering or biology for example and their resolution often requires a combination of methods coming from areas such as functional and harmonic analysis differential geometry and geometric measure theory Among the PDE problems discussed were the Cahn Hilliard model of phase transitions and domain walls vortices in Ginzburg Landau type models for superconductivity and superfluidity the Ohno Kawasaki model for diblock copolymers models of image enhancement and Monge Ampere functions The articles give a sampling of problems and methods in this diverse area of mathematics which touches a large part of modern mathematics and its applications **Projective Geometry and**

De Coster, P. Habets, 2006-03-21 This book introduces the method of lower and upper solutions for ordinary differential equations This method is known to be both easy and powerful to solve second order boundary value problems Besides an extensive introduction to the method the first half of the book describes some recent and more involved results on this subject These concern the combined use of the method with degree theory with variational methods and positive operators The second half of the book concerns applications This part exemplifies the method and provides the reader with a fairly large introduction to the problematic of boundary value problems Although the book concerns mainly ordinary differential equations some attention is given to other settings such as partial differential equations or functional differential equations A detailed history of the problem is described in the introduction Presents the fundamental features of the method Construction of lower and upper solutions in problems Working applications and illustrated theorems by examples Description of the history of the method and Bibliographical notes **Bulletin of the American Mathematical Society**
