Plants have long harnessed the chemical characteristics of aromatic compounds to shape the world around them Frankincense resin from the genus *Boswellia* seals injured tissues and protects trees from invading pathogens Jasmine produces a molecule called linalool that attracts pollinating moths with its flowery scent Tobacco uses a similarly sweet smelling compound called benzyl acetone to attract pollinators Only recently in the evolutionary history of plants however have humans learned to co opt their fragrances to seduce heal protect and alter moods themselves In this wide ranging and accessible new book biologist turned perfumer Elise Vernon Pearlstine turns our human centered perception of fragrance on its head and investigates plants evolutionary reasons for creating aromatic molecules Delving into themes of spirituality wealth power addiction royalty fantasy and more Pearlstine uncovers the natural history of aromatic substances and their intersection with human culture and civilization Global Vegetation Jörg S. Arno, Carl E. Fiedler, 2020-10-01 Concluding with an enticing visitors guide to notable Douglas fir specimens throughout the West this book offers lively perspectives on a tree that we perhaps take for granted too often Coast Weekend Westerners familiar with their forests may think they know the Douglas fir but how well do they Douglas firs are found in the continental northwest from British Columbia to as far south as Oaxaca Mexico They flourish in the Cascades Rocky Mountains Sierra and other mountain ranges as well as in desert valleys Incredibly hardy this tree adopts various strategies to occupy more kinds of habitats than any other native tree even becoming an uncontrollable invader in some regions crowding out ponderosa pines western larch aspen groves and mountain grasslands Yet the utility of this noble species is immense Douglas firs yield more high quality construction lumber than any other tree in the world Most intriguing of all perhaps is that the story of the Douglas fir has gone untold Douglas Fir fills this literary gap and presents an engaging profile of the Douglas fir and its relationship to people commerce culture and wilderness **Forest Genomics and Biotechnology** Richard Meilan, Matias Kirst, 2019-12-19 Developments in genomics and biotechnology are opening up new avenues for accelerating the domestication of forest trees in a climate change driven world This book presents an authoritative update of forest tree biotechnology and genomics methodologies procedures and accomplishments from basic biological science to applications in forestry and related sciences It gives expert evaluation of achievements and discussion about the impact that novel forest biotechnological and genomics approaches are having on traditional breeding for improvement of forest tree species and production of forest based products It also describes the legal and regulatory aspects of forest biotechnology with an emphasis on biosafety It is a reference for forest biologists including basic and applied scientists involved in forest tree breeding and biotechnology bioenergy research biomaterial product development It is a comprehensive text for graduate level students in the areas of Plant Biology and Forest Genetics Silviculture and Agroforestry and Bioenergy Science and Technology **Step Wise Protocols for Somatic Embryogenesis of Important Woody Plants** Shri Mohan Jain, Pramod Gupta, 2018-06-11 World population is increasing at an alarming rate and this has resulted in increasing tremendously the demand for tree products such as wood for construction materials fuel and paper fruits oils and medicines etc This has put immense pressure on the world s supplies of trees and raw material to industry and will continue to do so as long as human population continues to grow Also the quality of human diet especially nutritional components is adversely affected due to limited genetic improvement of most of fruit trees Thus there is an immediate need to increase productivity of trees Improvement has been made through conventional breeding methods however conventional breeding is very slow due to long life cycle of trees A basic strategy in tree improvement is to capture genetic gain through clonal propagation Clonal

propagation via organogenesis is being used for the production of selected elite individual trees However the methods are labour intensive costly and produce low volumes Genetic gain can now be captured through somatic embryogenesis Formation of embryos from somatic cells by a process resembling zygotic embryogenesis is one of the most important features of plants In 1958 Reinert in Germany and Steward in USA independently reported somatic embryogenesis in carrot cultures Since then tremendous progress in somatic embryogenesis of woody and non woody plants has taken place It offers a potentially large scale propagation system for superior clones Storm Donna Jo Napoli,2015-02-10 Having lost her family in a massive flood sixteen year old Sebah finds her way onto a gigantic ark where she must conceal herself from Noah and his family until it is safe for her and another stowaway to slip away *Horticultural Reviews, Volume 47* Ian Warrington,2019-11-18 Horticultural Reviews presents state of the art reviews on topics in horticultural science and technology covering both basic and applied research Topics covered include the horticulture of fruits vegetables nut crops and ornamentals These review articles written by world authorities bridge the gap between the specialized researcher and the broader community of horticultural scientists and teachers **Why Look at Plants?** ,2018-11-05 Winner of the 2019 Outstanding Academic Titles award in Choice a publishing unit of the Association of College Research Libraries ACRL Why Look at Plants proposes a thought provoking and fascinating look into the emerging cultural politics of plant presence in contemporary art Through the original contributions of artists scholars and curators who have creatively engaged with the ultimate otherness of plants in their work this volume maps and problematizes new intra active agential interconnectedness involving human non human biosystems central to artistic and philosophical discourses of the Anthropocene Plant s fixity perceived passivity and resilient silence have relegated the vegetal world to the cultural background of human civilization However the recent emergence of plants in the gallery space constitutes a wake up call to reappraise this relationship at a time of deep ecological and ontological crisis Why Look at Plants challenges readers pre established notions through a diverse gathering of insights stories experiences perspectives and arguments encompassing multiple disciplines media and methodologies
