Was Ludwig von Mises a Conventionalist? Alexander Linsbichler, 2017-06-08 This book presents a concise introduction to the epistemology and methodology of the Austrian School of economics as defended by Ludwig von Mises The author provides an innovative interpretation of Mises arguments in favour of the a priori truth of praxeology the received view of which contributed to the academic marginalisation of the Austrian School The study puts forward a unique argument that Mises perhaps unintentionally defends a form of conventionalism Chapters in the book include detailed discussions of individualism historicism epistemological positions and essentialism The author goes on to discuss Mises justification of the fundamental axiom and proposes a conventionalist interpretation By presenting praxeology as a conventionalist research programme the author aims to reinvigorate the

interaction between the Austrian School mainstream economics and the philosophy of science This comprehensive reconstruction is suitable for economists interested in the history and philosophy of their discipline as well as for philosophers of science

Thinking Through Twentieth-Century Architecture Nicholas Ray, 2023-02-08 Shortlisted for the Architectural Book Awards 2024 Thinking Through Twentieth Century Architecture connects the practice of architecture with its recent history and its theoretical origins those philosophical ideas that lay behind modernism and its aftermath By analyzing in straightforward and jargon free language the genesis of modernism and the complex reactions to it the book clarifies a continuing debate It has been specifically written to connect issues of theory history and contemporary practice and to allow students to make these connections easily This is a history of twentieth century architecture written with close critical attention to the theories that lie behind the works described Importantly unlike other historical accounts it does not take sides and urge the reader to identify with one strand of thinking or style of architecture at the expense of others but it

presents a dispassionate view with persuasive arguments on behalf of different positions It pursues the history of European and American architecture chronologically but the history is interwoven with the philosophical ideas that informed both writers and architects and are essential for its understanding The book is relevant to current issues of contemporary practice and education showing that philosophical issues are fundamental and those relating to design decisions never go away It includes 200 illustrations and will appeal to all those interested in twentieth century architecture and to architectural students

Philosophy as Disability & Exclusion Simon Hayhoe,2015-12-01 Philosophy as Disability and Exclusion examines the history of ideas on arts in the education of people who are blind in England from 1688 to 2010 This book also examines a number of the earlier influences on the enlightenment and the international context of this topic The two hypotheses on which this study is based are 1 Our

understanding of blindness in English intellectual culture is less to do with homologous physical characteristics. Instead, it is more to do with an ethical philosophy of human capacity.² The arts education of people who are blind through touch tells us much about our psychology of mythologies and the intellectual construction of human thought. Furthermore, the myth that people who are blind are incapable of visual arts and have an enhanced capacity for the musical arts is one of the most engrained modern folklores. It is part of our cultural intellectual and philosophical conscience. In the process of investigating these hypotheses, this book argues that philosophies have linked immorality, intelligence, and physical ability. These have become connected in ways that are unrelated to eyesight in order to fulfill broader cultural processes of developing social theory. In this book, the process of knowledge creation is termed passive exclusion and is analyzed through an epistemological model of examining disability and exclusion.

The Heart of the Brain Gareth Leng, 2024-04-30. How hormonal signals in one small structure of the brain, the hypothalamus, govern our physiology and behavior. As human beings, we prefer to think of ourselves as reasonable. But how much of what we do is really governed by reason? In this book, Gareth Leng considers the extent to which one small structure of the neuroendocrine brain, the hypothalamus, influences what we do, how we love, and who we are. The hypothalamus contains a large variety of neurons. These communicate not only through neurotransmitters but also through peptide signals that act as hormones within the brain. While neurotransmitter signals tend to be ephemeral and confined by anatomical connectivity, the hormone signals that hypothalamic neurons generate are potent, wide-reaching, and long-lasting. Leng explores the evolutionary origins of these remarkable neurons and where the receptors for their hormone signals are found in the brain. By asking how the hypothalamic neurons and their receptors are regulated, he explores how the hypothalamus links our passions with our reason. **The Heart of the Brain** shows in an accessible way how this very small structure is very much at the heart of what makes us human.

Environmental Modelling Keith Beven, 2018-09-03. Uncertainty in the predictions of science when applied to the environment is an issue of great current relevance in relation to the impacts of climate change, protecting against natural and man-made disasters, pollutant transport, and sustainable resource management. However, it is often ignored both by scientists and decision makers or interpreted as a conflict or disagreement between scientists. This is not necessarily the case; the scientists might well agree, but their predictions would still be uncertain, and knowledge of that uncertainty might be important in decision making. **Environmental Modelling: An Uncertain Future** introduces students, scientists, and decision makers to the different concepts and techniques of uncertainty estimation in environmental prediction, the philosophical background to different concepts of uncertainty, the constraint of

uncertainties by the collection of observations and data assimilation in real time forecasting techniques for decision making under uncertainty This book will be relevant to environmental modellers practitioners and decision makers in hydrology hydraulics ecology meteorology and oceanography geomorphology geochemistry soil science pollutant transport and climate change A companion website for the book can be found at www.uncertainfuture.org.uk
