This is a spherical cow. It's floating in space in a vacuum. From the center of this cow, it is emitting strange electric field at the rate of $\mathbf{E}(r) = (\mu r + 1)\hat{r}$, where μ is the “Moo” constant and r is the radius from center of cow. If the radius of the cow is 4 m, (a) determine the total charge is enclosed. Make sure to (b) **state the expression for Guass's law**, and (c) **explain** your reasoning. Lastly, (d) what difference would we expect if this cow has its charge distribution on its surface compared to total volume?

Consider a Cylindrical Cow John Harte, 2001-02 This book uses real problems in environmental science rather than relying on the more traditional cookbook problems found in textbooks Following in the tradition of *Consider a Spherical Cow* the *Cylindrical Cow* will help students achieve a whole new level of environmental modeling and problem solving Featuring a new core set of 25 fully worked out problems this book uses real problems in environmental science rather than relying on the more traditional cookbook problems found in textbooks It is organized according to five thematic sections on probability optimization scaling differential equations and stability feedback Each section begins with a general treatment of the relevant mathematical concepts and concludes with a range of homework exercises to help students sharpen their modeling skills Like its predecessor this book will empower students with the mathematical skills needed to cut through the complexity

of real world problems Escape from Model Land Erica Thompson,2022-12-06 Why mathematical models are so often wrong and how we can make better decisions by accepting their limits Whether we are worried about the spread of COVID 19 or making a corporate budget we depend on mathematical models to help us understand the world around us every day But models aren't a mirror of reality In fact they are fantasies where everything works out perfectly every time And relying on them too heavily can hurt us In Escape from Model Land statistician Erica Thompson illuminates the hidden dangers of models She demonstrates how models reflect the biases perspectives and expectations of their creators Thompson shows us why understanding the limits of models is vital to using them well A deeper meditation on the role of mathematics this is an essential book for helping us avoid either confusing the map with the territory or throwing away the map completely instead pointing to more nuanced ways to Escape from Model Land

Critical Skills for Environmental Professionals Jennifer Pontius, Alan McIntosh, 2019-12-20 This textbook focuses on a set of skills based learning outcomes common among undergraduate environmental programs. It covers critical scientific skills and ways of thinking that bridge the gap between the knowledge based content of introductory environmental textbooks and the professional skills students of the environment need to succeed in both their academic programs and professional careers. This emphasis on skills is gaining more traction among academic programs across the country as they shift focus from knowledge delivery to learning outcomes and professional competencies. The book features clear methodological frameworks, engaging practice exercises, and a range of assessment case studies suitable for use across academic levels. For introductory levels, this text uses guided practice exercises to expose students to the skills they will need to master. At the capstone level, this text allows students to apply the knowledge they have gained to real world issues and to evaluate their competency in key programmatic learning outcomes. A detailed answer key with rubrics customized for specific questions and sample answers at various competency levels is available to verified course instructors. Science Of The Earth, Climate And Energy Milton W Cole, Angela D Lueking, David L Goodstein, 2018-04-27 Whether on personal health, politics, or climate change, we are constantly bombarded with more numerous breaking news articles than we have time for. In such an environment, how can we tell which to read or which is even true? *Science of the Earth, Climate and Energy* helps readers understand major issues that affect us individually and the world as a whole. In language that a non-scientist can follow easily, the book first explains the general principles of science, its nature, and how it works, with a certain degree of emphasis on the meaning of the words, uncertainty, and fact. Before it goes into the related topics of the earth, its climate, and energy sources, at a level that does not require a background in science. Finally, the book addresses what individuals and societies can do to mitigate problems associated with both climate change and limited resources.
