**Wireless Sensor Networks for Structural Health Monitoring** Jiannong Cao,Xuefeng Liu,2016-01-29 This brief covers the emerging area of wireless sensor network WSN based structural health monitoring SHM systems and introduces the authors WSN based platform called SenetSHM It helps the reader differentiate specific requirements of SHM applications from other traditional WSN applications and demonstrates how these requirements are addressed by using a series of systematic approaches The brief serves as a practical guide explaining both the state of the art technologies in domain

specific applications of WSNs as well as the methodologies used to address the specific requirements for a WSN application. In particular, the brief offers instruction for problem formulation and problem solving based on the authors' own experiences implementing SenetSHM. Seven concise chapters cover the development of hardware and software design of SenetSHM as well as in-field experiments conducted while testing the platform. The brief's exploration of the SenetSHM platform is a valuable feature for civil engineers designing their own similar SHM products and the various concrete examples of problem formulation and algorithm design will make this an essential read for practitioners, researchers, and students alike.

Computational Science and Its Applications - ICCSA 2014 Beniamino Murgante, Sanjay Misra, Ana Maria Alves Coutinho Rocha, Carmelo Torre, Jorge Gustavo Rocha, Maria Irene Falcão, David Taniar, Bernady O. McGeoch, 2008-05-29. The Workshop on Experimental Algorithms (WEA) is intended to be an international forum for research on the experimental evaluation and engineering of algorithms as well as in various aspects of computational optimization and its applications. The emphasis of the workshop is the use of experimental methods to guide the design, analysis, implementation, and evaluation of algorithms, heuristics, and optimization programs. WEA 2008 was held at the Provincetown Inn, Provincetown, MA, USA, on May 30–June 1, 2008. This was the seventh workshop of the series after Rome 2007, Menorca 2006, Santorini 2005, Rio de Janeiro 2004, Asconia 2003, and Riga 2001. This volume contains all contributed papers accepted for presentation at the workshop. The 26 contributed papers were selected by the Program Committee on the basis of at least three refereed reports, some contributed by trusted external referees. In addition to the 26 contributed papers, the program contained two invited talks. Camil Demetrescu of the University of Rome La Sapienza spoke on Visualization in Algorithm Engineering. David S. Johnson of AT&T Labs Research gave a talk on Bin Packing: From Theory to Experiment and Back Again. We would like to thank the authors who responded to the call for papers, our invited speakers, the members of the Program Committee, the external referees, and the Organizing Committee members for making this workshop possible.

Clustering and Information Retrieval Weili Wu, Hui Xiong, Shashi Shekhar, 2003-11-30. Clustering is an important technique for discovering relatively dense sub-regions or sub-spaces of a multi-dimension data distribution. Clustering has been used in information retrieval for many different purposes such as query expansion, document grouping, document indexing, and visualization of search results. In this book, we address issues of clustering algorithms, evaluation methodologies, applications, and architectures for information retrieval. The first two chapters discuss clustering algorithms. The chapter from

Baeza Yates et al describes a clustering method for a general metric space which is a common model of data relevant to information retrieval The chapter by Guha Rastogi and Shim presents a survey as well as detailed discussion of two clustering algorithms CURE and ROCK for numeric data and categorical data respectively Evaluation methodologies are addressed in the next two chapters Ertoz et al demonstrate the use of text retrieval benchmarks such as TRECS to evaluate clustering algorithms He et al provide objective measures of clustering quality in their chapter Applications of clustering methods to information retrieval is addressed in the next four chapters Chu et al and Noel et al explore feature selection using word stems phrases and link associations for document clustering and indexing Wen et al and Sung et al discuss applications of clustering to user queries and data cleansing Finally we consider the problem of designing architectures for information retrieval Crichton Hughes and Kelly elaborate on the development of a scientific data system architecture for information retrieval

**Estimating Species Trees** L. Lacey Knowles, Laura S. Kubatko, 2011-05-09 Recent computational and modeling advances have produced methods for estimating species trees directly avoiding the problems and limitations of the traditional phylogenetic paradigm where an estimated gene tree is equated with the history of species divergence The overarching goal of the volume is to increase the visibility and use of these new methods by the entire phylogenetic community by specifically addressing several challenges i firm understanding of the theoretical underpinnings of the methodology ii empirical examples demonstrating the utility of the methodology as well as its limitations and iii attention to technical aspects involved in the actual software implementation of the methodology As such this volume will not only be poised to become the quintessential guide to training the next generation of researchers but it will also be instrumental in ushering in a new phylogenetic paradigm for the 21st century
