Commutative Algebra Constructive Methods Finite Projective Modules Algebra And Applications:

Commutative Algebra: Constructive Methods Henri Lombardi,Claude Quitté,2015-07-22 Translated from the popular French edition this book offers a detailed introduction to various basic concepts methods principles and results of commutative algebra It takes a constructive viewpoint in commutative algebra and studies algorithmic approaches alongside several abstract classical theories Indeed it revisits these traditional topics with a new and simplifying manner making the subject both accessible and innovative The algorithmic aspects of such naturally abstract topics as Galois theory Dedekind rings Pr fer rings finitely generated projective modules dimension theory of commutative rings and others in the current treatise are all analysed in the spirit of the great developers of constructive algebra in the nineteenth century This updated and revised edition contains over 350 well arranged exercises together with their helpful hints for solution A basic knowledge of linear algebra group theory elementary number theory as well as the fundamentals of ring and module theory is required Commutative Algebra Constructive Methods will be useful for graduate students and also researchers instructors and theoretical computer scientists Constructive Commutative Algebra Ihsen Yengui,2015-12-11 The main goal of this book is to find the constructive content hidden in abstract proofs of concrete theorems in Commutative Algebra especially in well known theorems concerning projective modules over polynomial rings mainly the Quillen Suslin theorem and syzygies of multivariate polynomials with coefficients in a valuation ring Simple and constructive proofs of some results in the theory of projective modules over polynomial rings are also given and light is cast upon recent progress on the Hermite ring and Gr bner ring conjectures New conjectures on unimodular completion arising from our constructive approach to the unimodular completion problem are presented Constructive algebra can be understood as a first preprocessing step for computer algebra that leads to the discovery of general algorithms even if they are sometimes not efficient From a logical point of view the dynamical evaluation gives a constructive substitute for two highly nonconstructive tools of abstract algebra the Law of Excluded Middle and Zorn s Lemma For instance these tools are required in order to construct the complete prime factorization of an ideal in a Dedekind ring whereas the dynamical method reveals the computational content of this construction These lecture notes follow this dynamical philosophy *Logic, Language, Information, and Computation* Rosalie Iemhoff,Michael Moortgat,Ruy de Queiroz,2019-06-23 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 26th Workshop on Logic Language Information and Communication WoLLIC 2019 held in Utrecht The Netherlands in July 2019 The 41 full papers together with 6 invited lectures presented were fully reviewed and selected from 60 submissions The idea is to have a forum which is large enough in the number of possible interactions between logic and the sciences related to information and computation and yet is small enough to allow for concrete and useful interaction among participants *Concepts of Proof in Mathematics, Philosophy, and Computer Science* Dieter Probst,Peter Schuster,2016-07-25 A proof is a successful demonstration that a

conclusion necessarily follows by logical reasoning from axioms which are considered evident for the given context and agreed upon by the community It is this concept that sets mathematics apart from other disciplines and distinguishes it as the prototype of a deductive science Proofs thus are utterly relevant for research teaching and communication in mathematics and of particular interest for the philosophy of mathematics In computer science moreover proofs have proved to be a rich source for already certified algorithms This book provides the reader with a collection of articles covering relevant current research topics circled around the concept proof It tries to give due consideration to the depth and breadth of the subject by discussing its philosophical and methodological aspects addressing foundational issues induced by Hilbert s Programme and the benefits of the arising formal notions of proof without neglecting reasoning in natural language proofs and applications in computer science such as program extraction **Handbook of Constructive Mathematics** Douglas Bridges,Hajime Ishihara,Michael Rathjen,Helmut Schwichtenberg,2023-05-11 Constructive mathematics mathematics in which there exists always means we can construct is enjoying a renaissance fifty years on from Bishop s groundbreaking account of constructive analysis constructive mathematics has spread out to touch almost all areas of mathematics and to have profound influence in theoretical computer science This handbook gives the most complete overview of modern constructive mathematics with contributions from leading specialists surveying the subject s myriad aspects Major themes include constructive algebra and geometry constructive analysis constructive topology constructive logic and foundations of mathematics and computational aspects of constructive mathematics A series of introductory chapters provides graduate students and other newcomers to the subject with foundations for the surveys that follow Edited by four of the most eminent experts in the field this is an indispensable reference for constructive mathematicians and a fascinating vista of modern constructivism for the increasing number of researchers interested in constructive approaches **Ordered Algebraic Structures and Related Topics** Fabrizio Broglia,2017 Contains the proceedings of the international conference Ordered Algebraic Structures and Related Topics held in October 2015 at CIRM Luminy Marseilles Papers cover topics in real analytic geometry real algebra and real algebraic geometry including complexity issues model theory of various algebraic and differential structures Witt equivalence of fields and the moment problem *Applications of Categorical Algebra* Alex Heller,1970 This volume presents the proceedings of the Symposium in Pure Mathematics held in New York City on April 10 11 1968 The organizing committee felt that it was appropriate to devote attention to the applications of categorical algebra rather than to its autonomous development It was explicit problems in topology and algebra which led to the engendering of category theory and the applications continue to be numerous and lively It is hoped the included papers show the diversity of research in categorical algebra Paul Lorenzen -- Mathematician and Logician Gerhard Heinzmann,Gereon Wolters,2021-08-17 This open access book examines the many contributions of Paul Lorenzen an outstanding philosopher from the latter half of the 20th century It features papers focused on integrating Lorenzen s original approach into the

history of logic and mathematics The papers also explore how practitioners can implement Lorenzen s systematical ideas in today s debates on proof theoretic semantics databank management and stochastics Coverage details key contributions of Lorenzen to constructive mathematics Lorenzen s work on lattice groups and divisibility theory and modern set theory and Lorenzen s critique of actual infinity The contributors also look at the main problem of Grundlagenforschung and Lorenzen s consistency proof and Hilbert s larger program In addition the papers offer a constructive examination of a Russell style Ramified Type Theory and a way out of the circularity puzzle within the operative justification of logic and mathematics Paul Lorenzen s name is associated with the Erlangen School of Methodical Constructivism of which the approach in linguistic philosophy and philosophy of science determined philosophical discussions especially in Germany in the 1960s and 1970s This volume features 10 papers from a meeting that took place at the University of Konstanz   Commutative Algebra J. William Hoffman,Xiaohong Jia,Haohao Wang,2016-04-15 The purpose of this book is twofold to present some basic ideas in commutative algebra and algebraic geometry and to introduce topics of current research centered around the themes of Gr bner bases resultants and syzygies The presentation of the material combines definitions and proofs with an emphasis on concrete examples The authors illustrate the use of software such as Mathematica and Singular The design of the text in each chapter consists of two parts the fundamentals and the applications which make it suitable for courses of various lengths levels and topics based on the mathematical background of the students The fundamentals portion of the chapter is intended to be read with minimal outside assistance and to learn some of the most useful tools in commutative algebra The applications of the chapter are to provide a glimpse of the advanced mathematical research where the topics and results are related to the material presented earlier In the applications portion the authors present a number of results from a wide range of sources without detailed proofs The applications portion of the chapter is suitable for a reader who knows a little commutative algebra and algebraic geometry already and serves as a guide to some interesting research topics This book should be thought of as an introduction to more advanced texts and research topics Its novelty is that the material presented is a unique combination of the essential methods and the current research results The goal is to equip readers with the fundamental classical algebra and geometry tools ignite their research interests and initiate some potential research projects in the related areas   Commutative Algebra Irena Peeva,2022-02-18 This contributed volume is a follow up to the 2013 volume of the same title published in honor of noted Algebraist David Eisenbud s 65th birthday It brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Category Theory Combinatorics Computational Algebra Homological Algebra Hyperplane Arrangements and Non commutative Algebra The book aims to showcase the area and aid junior mathematicians and researchers who are new to the field in broadening their background and gaining a deeper understanding of the current research in this area Exciting

developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research   *Homological Methods in Commutative Algebra* Andrea Ferretti,2023-12-05 This book develops the machinery of homological algebra and its applications to commutative rings and modules It assumes familiarity with basic commutative algebra for example as covered in the author s book Commutative Algebra The first part of the book is an elementary but thorough exposition of the concepts of homological algebra starting from categorical language up to the construction of derived functors and spectral sequences A full proof of the celebrated Freyd Mitchell theorem on the embeddings of small Abelian categories is included The second part of the book is devoted to the application of these techniques in commutative algebra through the study of projective injective and flat modules the construction of explicit resolutions via the Koszul complex and the properties of regular sequences The theory is then used to understand the properties of regular rings Cohen Macaulay rings and modules Gorenstein rings and complete intersections Overall this book is a valuable resource for anyone interested in learning about homological algebra and its applications in commutative algebra The clear and thorough presentation of the material along with the many examples and exercises of varying difficulty make it an excellent choice for self study or as a reference for researchers   *Progress in Commutative Algebra 1* Christopher Francisco,Lee C. Klingler,Sean Sather-Wagstaff,Janet C. Vassilev,2012-04-26 This is the first of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra These volumes present current trends in two of the most active areas of commutative algebra non noetherian rings factorization ideal theory integrality and noetherian rings the local theory graded situation and interactions with combinatorics and geometry This volume contains combinatorial and homological surveys The combinatorial papers document some of the increasing focus in commutative algebra recently on the interaction between algebra and combinatorics Specifically one can use combinatorial techniques to investigate resolutions and other algebraic structures as with the papers of Fl ystad on Boij S derburg theory of Geramita Harbourne and Migliore and of Cooper on Hilbert functions of Clark on minimal poset resolutions and of Mermin on simplicial resolutions One can also utilize algebraic invariants to understand combinatorial structures like graphs hypergraphs and simplicial complexes such as in the paper of Morey and Villarreal on edge ideals Homological techniques have become indispensable tools for the study of noetherian rings These ideas have yielded amazing levels of interaction with other fields like algebraic topology via differential graded techniques as well as the foundations of homological algebra analysis via the study of D modules and combinatorics as described in the previous paragraph The homological articles the editors have included in this volume relate mostly to how homological techniques help us better understand rings and singularities both noetherian and non noetherian such as in the papers by Roberts Yao Hummel and Leuschke   **Maple in**

Mathematics Education and Research Robert M. Corless,Jürgen Gerhard,Ilias S. Kotsireas,2021-07-19 This book constitutes refereed proceedings of the 4th Maple Conference MC 2020 held in Waterloo Ontario Canada in November 2020 The 25 revised full papers and 3 short papers were carefully reviewed and selected out of 75 submissions one invited paper is also presented in the volume The papers included in this book cover topics in education algorithms and applciations of the mathematical software Maple **Mathematical Reviews** ,2004 **A Primer of Algebraic Geometry** Huishi Li,Freddy Van Oystaeyen,2017-12-19 Presents the structure of algebras appearing in representation theory of groups and algebras with general ring theoretic methods related to representation theory Covers affine algebraic sets and the nullstellensatz polynomial and rational functions projective algebraic sets Groebner basis dimension of algebraic sets local theory curves and elliptic curves and more **Handbook of Algebra** ,2003-10-15 Handbook of Algebra **General Catalog -- University of California, Santa Cruz** University of California, Santa Cruz,1987 **Topics in Computational Algebra** G.M. Piacentini Cattaneo,Elisabetta Strickland,2012-12-06 The main purpose of these lectures is first to briefly survey the fundamental con nection between the representation theory of the symmetric group Sn and the theory of symmetric functions and second to show how combinatorial methods that arise naturally in the theory of symmetric functions lead to efficient algorithms to express various prod ucts of representations of Sn in terms of sums of irreducible representations That is there is a basic isometry which maps the center of the group algebra of Sn Z Sn to the space of homogeneous symmetric functions of degree n An This basic isometry is known as the Frobenius map F The Frobenius map allows us to reduce calculations involving characters of the symmetric group to calculations involving Schur functions Now there is a very rich and beautiful theory of the combinatorics of symmetric functions that has been developed in recent years The combinatorics of symmetric functions then leads to a number of very efficient algorithms for expanding various products of Schur functions into a sum of Schur functions Such expansions of products of Schur functions correspond via the Frobenius map to decomposing various products of irreducible representations of Sn into their irreducible components In addition the Schur functions are also the characters of the irreducible polynomial representations of the general linear group over the complex numbers GLn C *Banach Algebras and Their Applications* Anthony To-Ming Lau,Volker Runde,2004 This proceedings volume is from the international conference on Banach Algebras and Their Applications held at the University of Alberta Edmonton It contains a collection of refereed research papers and high level expository articles that offer a panorama of Banach algebra theory and its manifold applications Topics in the book range from theory to abstract harmonic analysis to operator theory It is suitable for graduate students and researchers interested in Banach algebras Algebraic K-theory And Its Applications - Proceedings Of The School Hyman Bass,Aderemi Oluyomi Kuku,C Pedrini,1999-03-12 The Proceedings volume is divided into two parts The first part consists of lectures given during the first two weeks devoted to a workshop featuring state of the art expositions on Overview of Algebraic K theory including various constructions examples and

illustrations from algebra number theory algebraic topology and algebraic differential geometry as well as on more concentrated topics involving connections of K theory with Galois etale cyclic and motivic co homologies values of zeta functions and Arithmetics of Chow groups and zero cycles The second part consists of research papers arising from the symposium lectures in the third week
