Interoperating Geographic Information Systems Michael Goodchild,Max J.

Egenhofer,Robin Fegeas,Cliff Kottman,2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government

Digital Libraries - Current Issues Nabil R. Adam,Bharat K. Bhargava,Yelena Yesha,1995-04-19 This volume is the first book coherently summarizing the current issues in digital libraries research design and management It presents in a homogeneous way thoroughly revised versions of 15 papers accepted for the First International Workshop on Digital Libraries DL 94 held at Rutgers University in May 1994 in addition there are two introductory chapters provided by the volume editors as well as a comprehensive bibliography listing 262 entries Besides introductory aspects the topics addressed are administration and management information retrieval and hypertext classification and indexing and prototypes and

applications The volume is intended for researchers and design professionals in the field as well as for experts from libraries administration and scientific publishing Geographical Information Systems: Principles David J. Maguire,Michael F. Goodchild,David Rhind,1991 Geographical Information Systems: Applications David J. Maguire,Michael F. Goodchild,David Rhind,1991 *Library Literature & Information Science* ,2007 An index to library and information science literature *Applying Mobile Code to Distributed Systems* David A. Halls,1997 Abstract Use of mobile code can make distributed systems and the abstractions they provide more flexible to build and use Richer functionality can be given to the interaction between processes by allowing code to be sent between them More convenient application level operations can be made over a network By making higher order language features transmissible distributed components can be tightly bound together when they communicate At the same time familiar distributed systems can be built using mobile code Mobile code can make distributed systems adaptable to application needs Rather than fixing the interface to a resource and the pattern of interaction with it a minimal interface can be defined and code implementing higher level interfaces placed alongside it as and when required These higher level interfaces can be application specific allowing for interaction patterns that were unknown at the time the resource was made available Sending code close to a resource can also reduce network usage because the point of interaction with it moves The combination of document markup supporting hypertext and a language supporting state saving allows for stateful client server sessions with stateless servers and lightweight clients Putting dormant mobile code in documents provides an alternative to holding knowledge of application functionality on a server machine or running arbitrary code on a client machine Mobile code helps to support user mobility Personalised environments that support state saving can follow a user between computers Heterogeneous state saving allows a user s programs to be relocated between computers By using a mobile code system with language support for state saving applications can direct arbitrary component migration without priming program servers with specific support In summary this dissertation supports the thesis that mobile code can be used to enhance distributed systems **Grundlagen von Datenbanksystemen** Ramez Elmasri,Sham Navathe,2009 **Medical Imaging** ,1995 **IEEE Proceedings of the Southeastcon** ,1991 *Intuitive Human Interfaces for Organizing and Accessing Intellectual Assets* Gunter Grieser,Yuzuru Tanaka,2005-02-09 This book constitutes the thoroughly refereed post proceedings of the 2004 International Workshop on Intuitive Human Interfaces for Organizing and Accessing Intellectual Assets held in Dagstuhl Castle Germany in March 2004 The 17 revised full papers presented together with an introductory overview have gone through two rounds of reviewing and revision The papers are organized in topical sections on man machine interface for intuitive knowledge access intelligent pad and meme media visualization and design of information access spaces and semantics and narrative organization and access of knowledge **Innovations and Advanced Techniques in Computer and Information Sciences and Engineering** Tarek Sobh,2007-09-04 This book includes a set of rigorously reviewed world class manuscripts addressing and detailing
