*"Models can help students clarify ideas that are often confusing in a purely symbolic mode."* ~ Van de Walle, Lovin

Modeling is an imperative first step in building a long-term retention of the concepts and the connected procedures associated with multiplication and division of fractions. Teachers are encouraged to scaffold instruction multiplication and division of fractions by reviewing the concept of multiplication and division with students. For multiplication, remind students that when developing the concept of  $3 \times 4$  in earlier grades, the words "3 groups of 4" were used to describe the symbolic relationship. For division,  $\frac{12}{3}$  symbolically represents the question "How many groups of 3 are in 12?" The review of these key concepts will assist students in making connections to prior knowledge when developing an understanding of multiplication and division of fractions.

1. Ask students to consider the problem "John has  $1\frac{1}{2}$  gallons of liquid fertilizer concentrate. Each batch of fertilizer requires  $\frac{3}{4}$  gallon of liquid fertilizer concentrate. How many batches can John make?" The problem is asking how many batches can John make (each batch using  $\frac{3}{4}$  gallon concentrate) from  $1\frac{1}{2}$  gallons concentrate.
