## **Diseases Of The Nervous System:**

**Diseases of the Nervous System** Victor Mahoney, 2021-11-16 Nervous system diseases are also known as neurological disorders. The nervous system consists of central and peripheral nervous systems. The brain and spinal cord together make the central nervous system. The brain is present in the skull and protected by cranium, whereas the spinal cord is protected by the vertebrae. Nervous system diseases are neurological disorders that affect the functioning of the whole system. They are majorly caused by traumatic brain injury, infection in the brain or spinal cord, or structural defects such as anencephaly and hypospadias. The symptoms of the nervous system diseases are pain in the face, arms, back, or legs, lack of concentration, loss of feeling, and constant headache. Epilepsy, spina bifida, Parkinson's disease, seizure disorders, and amyotrophic lateral sclerosis are some examples of the diseases of the nervous system. This book contains some path-breaking studies related to the diseases of the nervous system. It presents researches and studies performed by experts across the globe. It is appropriate for students seeking detailed information in neurology as well as for experts.

Such a classification helps us to obtain clearer views of the primary relations of disease but is not convenient for systematic description. For this a hybrid system is necessary in which organic and structural diseases are classified according to their seat in the nerves, spinal cord, or brain. With each group may be placed some nutritional or functional maladies of local incidence. The bulk of these diseases are however best considered separately after the organic diseases have been described since many of them are of wide distribution or uncertain seat. About the Publisher

Gowers,2017-11-08 Excerpt from A Manual of Diseases of the Nervous System Vol 1 A classification of Diseases of the Nervous System at once scientific exact and convenient for systematic description is not at present possible If we attempt to classify the diseases according to either seat or nature we are met at once by difficulties which prevent any complete arrangement These difficulties arise from the fact that many diseases affect more than one part of the nervous system that the precise seat of other maladies is unknown and that we are still ignorant of the nature of a considerable number of diseases A rough division is often made into two broad classes of organic and functional disease The first class that of organic diseases comprehends those in which there is always a visible lesion manifesting sometimes the morbid process which constitutes the disease sometimes only the ultimate result of that process The second class that of functional diseases is less definite comprehending 1 those diseases that consist only in a disturbance of function and are there fore properly so designated and 2 many diseases which have this in common with true functional disease that they are transient and not permanent and that they are not known to depend on organic changes But there is also a large class of diseases in which no constant lesion has been discovered but which are not transient and cannot well be placed in either of these classes This simple classification is therefore inadequate It may be well to consider in what respect it needs alteration to meet the requirements of our present knowledge About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing
