International Symposium on Modelling and Simulation of Distributed Parameter Systems, 1987 Distributed Parameter Systems Tanehiro Futagami, S. G. Tzafestas, Yoshifumi Sunahara, 1989 **Index of Conference Proceedings** British Library. Document Supply Centre, 1991-07 **European Control Conference 1995**, 1995-09-05 Proceedings of the European Control Conference 1995 Rome Italy 5 8 September 1995 **Proceedings of the IASTED International Symposium, Modelling, Simulation and Optimization** International Association of Science and Technology for Development, 1990 FOCAPD-19/Proceedings of the 9th International Conference on Foundations of Computer-Aided Process Design, July 14 - 18, 2019 Salvador Garcia Munoz, Carl D. Laird, Matthew J. Realff, 2019-07-09 FOCAPD 19 Proceedings of the 9th International Conference on Foundations of Computer Aided Process Design July 14 18 2019 compiles the presentations given at the Ninth International Conference on Foundations of Computer Aided Process Design FOCAPD 2019 It highlights the meetings held at this event that brings together researchers educators and practitioners to identify new challenges and opportunities for process and product design Combines presentations from the Ninth International Conference on Foundations of Computer Aided Process Design FOCAPD 2019 Spatial Filtering for the Control of Smart Structures James E. Hubbard, 2009-11-27 What follows is my personal perspective on early events that played a significant role in the formation of the field now known as Smart Structures It is by no means meant to be all inclusive or definitive in any way but merely an account of personal experiences that ultimately lead to the development of the material contained and presented herein On March 23 1983 then President Ronald Reagan announced his intentions to develop a new system to reduce the threat of nuclear attack and end the strategy of mutual deterrence in an address to the nation entitled Address to the Nation on Defense and National Security The system he proposed became known as Star Wars after the popular movie because it was meant to provide a protective shield over the nation from space His speech mobilized the entire nation on a research and development path toward this end Investigations were conducted into new areas such as space based radar large aperture antennae and large deployable mirror concepts These proposed systems represented an entirely new class of structures that proved to provide new challenges in materials structures control systems and modeling For example antennae needed to monitor large areas of real estate in the continental United States required apertures on the order of 100 m

Object-Oriented Technology. ECOOP 2008 Workshop Reader Patrick Eugster, 2009-05-15 This book contains the final reports of the workshops held during the 22nd European Conference on Object Oriented Programming ECOOP 2008 in Paphos Cyprus in July 2008 The 11 collected reports from high quality workshops provided by the respective organizers all are related to selected aspects in the field of object oriented programming and technology The topics covered span areas related to object oriented programming and technology such as programming languages aspects parallel computing formal techniques software engineering tools and applications **Regional Analysis of Time-Fractional Diffusion Processes**

Fudong Ge, YangQuan Chen, Chunhai Kou, 2018-01-08 This monograph provides an accessible introduction to the regional analysis of fractional diffusion processes It begins with background coverage of fractional calculus functional analysis distributed parameter systems and relevant basic control theory New research problems are then defined in terms of their actuation and sensing policies within the regional analysis framework The results presented provide insight into the control theoretic analysis of fractional order systems for use in real life applications such as hard disk drives sleep stage identification and classification and unmanned aerial vehicle control The results can also be extended to complex fractional order distributed parameter systems and various open questions with potential for further investigation are discussed For instance the problem of fractional order distributed parameter systems with mobile actuators sensors optimal parameter identification optimal locations trajectory of actuators sensors and regional actuation sensing configurations are of great interest The book's use of illustrations and consistent examples throughout helps readers to understand the significance of the proposed fractional models and methodologies and to enhance their comprehension The applications treated in the book run the gamut from environmental science to national security Academics and graduate students working with cyber physical and distributed systems or interested in the applications of fractional calculus will find this book to be an instructive source of state of the art results and inspiration for further research *Nonlinear Time-discrete Systems* M. Gössel, 2006-04-11

Technology for Large Space Systems, 1984 **Scientific and Technical Aerospace Reports**, 1995 *Large Space Structures & Systems in the Space Station Era*, 1990 *Embedded Computing Systems: Applications, Optimization, and Advanced Design* Khalgui, Mohamed, Mosbahi, Olfa, Valentini, Antonio, 2013-04-30 Embedded computing systems play an important and complex role in the functionality of electronic devices With our daily routines becoming more reliant on electronics for personal and professional use the understanding of these computing systems is crucial Embedded Computing Systems Applications Optimization and Advanced Design brings together theoretical and technical concepts of intelligent embedded control systems and their use in hardware and software architectures By highlighting formal modeling execution models and optimal implementations this reference source is essential for experts researchers and technical supporters in the industry and academia **New Directions on Model Predictive Control** Jinfeng Liu, Helen E Durand, 2019-01-16 This book is a printed edition of the Special Issue New Directions on Model Predictive Control that was published in Mathematics

Proceedings and Recommendations of the Workshop on Ground Water Problems in the Ohio River Basin, 1981

Robotics, Automation and Control Pavla Pecherková, Miroslav Flídr, Jindřich Duník, 2008-10-01 This book was conceived as a gathering place of new ideas from academia industry research and practice in the fields of robotics automation and control The aim of the book was to point out interactions among various fields of interests in spite of diversity and narrow specializations which prevail in the current research The common denominator of all included chapters appears to be a synergy of various specializations This synergy yields deeper understanding of the treated problems Each new approach

applied to a particular problem can enrich and inspire improvements of already established approaches to the problem

Active Flow and Combustion Control 2014 Rudibert King, 2014-09-13 The book reports on the latest theoretical and experimental advances in the field of active flow and combustion control It covers new developments in actuator technology and sensing in robust and optimal open and closed loop control as well as in model reduction for control It collects contributions presented during the third edition of the Active Flow and Combustion Control conference held in September 10-12 2014 at the Technische Universität Berlin Germany This conference as well as the research presented in the book have been supported by the collaborative research center SFB 1029 Substantial efficiency increase in gas turbines through direct use of coupled unsteady combustion and flow dynamics funded by the DFG German Research Foundation Space Station Systems, 1989 **Optimal Observation for Cyber-physical Systems** Zhen Song, YangQuan Chen, Chellury R. Sastry, Nazif C. Tas, 2009-06-30 Optimal Observation for Cyber physical Systems addresses the challenge fundamental to the design of wireless sensor networks WSNs presented by the obligatory trade off between precise estimates and system constraints A unified theoretical framework based on the well established theory of optimal experimental design and providing consistent solutions to problems hitherto requiring a variety of approaches is put forward to solve a large class of optimal observation problems The Fisher information matrix plays a key role in this framework and makes it feasible to provide analytical solutions to some complex and important questions which could not be answered in the past Readers with an applied background in WSN implementation will find all the understanding of the key theory of optimal experimental design they need within this book The use of multiple examples to illustrate the theoretical parts of the book brings the subject into sharper focus than would an abstract theoretical disquisition
