2. Apply a light coating of grease to the inner side of the thrust plate bearing.

3. Place the clutch disc with the larger clutch disc against face on the transmission shaft.

4. Center the clutch disc using the clutch disc centering tool 99-525-6. Insert the two center bolts in the correct position and tighten the six bolts evenly from 25 to 30 N·m (18 to 22 ft·lb).

IMPORTANT: When you are reassembling the tractor, be sure that the released ends of the release bearing fork are centered between the clutch release forks. Failure to reassemble these parts properly during reassembly will later result in a hard clutch release adjustment procedure at which time when the engine is started, the released ends of the bearing release fork will locate into position resulting in excessive clutch pedal travel and failure to release the clutch.
