by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously

Routing and Wavelength Assignment for WDM-based Optical Networks Bijoy Chand Chatterjee, Nityananda Sarma, Partha Pratim Sahu, Eiji Oki, 2016-10-01 This book presents an in depth treatment of routing and wavelength assignment for optical networks and focuses specifically on quality of service and fault resiliency issues It reports on novel approaches for the development of routing and wavelength assignment schemes for fault resilient optical networks which improve their performance in terms of signal quality call blocking congestion level and reliability without a substantial increase in network setup cost The book first presents a solution for reducing the effect of the wavelength continuity constraint during the routing and wavelength assignment phase Further it reports on an approach allowing the incorporation of a traffic grooming mechanism with routing and wavelength assignment to enhance the effective channel utilization of a given capacity optical network using fewer electrical optical electrical conversions As a third step it addresses a quality of service provision scheme for wavelength division multiplexing WDM based optical networks Lastly the book describes the

inclusion of a tree based fault resilience scheme in priority based dispersion reduced wavelength assignment schemes for the purpose of improving network reliability while maintaining a better utilization of network resources. Mainly intended for graduate students and researchers, the book provides them with extensive information on both fundamental and advanced technologies for routing and wavelength assignment in optical networks. The topics covered will also be of interest to network planners and designers.
