Friction

1. A crate filled with defective golf balls sits on a horizontal floor. Only gravity and the support force of the floor act on it, as shown by the vectors for weight W and normal force n .

- The net force on the crate is zero (greater than zero).
- Acceleration for this is no acceleration.

2. A slight pull P is exerted on the crate, not enough to move it.

- The force of friction f acting on the crate is less than equal to (greater than) P .
- The net force on the crate is zero (greater than zero).

3. Pull P is increased until the crate begins to move. It is pulled so that it moves with constant velocity across the floor.

- Friction f is less than equal to (greater than) P .
- Constant velocity means acceleration is zero (greater than zero).
- The net force on the crate is less than equal to (greater than) zero.

4. Pull P is further increased and is now greater than friction f .

- The net force on the crate is less than (equal to) greater than zero.
- The net force acts opposed the right, so acceleration acts toward the left. right

- If the pulling force P is 150 N and the crate doesn't move, what is the magnitude of f ? 150 N
- If the pulling force P is 200 N and the crate doesn't move, what is the magnitude of f ? 200 N
- If the force of sliding friction is 200 N, what force is necessary to keep the crate sliding at constant velocity? 200 N
- If the mass of the crate is 50 kg and sliding friction is 250 N, what is the acceleration of the crate when the pulling force is 250 N? 0 m/s² 200 N? 1 m/s² 500 N? 5 m/s²
