

Chapter 4: Photosynthesis/Cell Respiration Study Guide

Name: _____

Date: _____

1. What is the primary source of energy for cells?
ATP- from carbohydrates
2. What are three types of carbon based molecules from which we can get energy? AND next to it write how much ATP can come from that molecule.
Carbohydrates - 36 ATP
Lipids -146 ATP
Protein usually broken down to amino acids (but sometimes 36 ATP)
3. ATP transfers energy from food to the _____.
Cellular process
4. Describe the relationship between bonds and energy.
Bonds break= release energy
Bonds form= store energy
5. Describe ATP, ADP, and AMP in terms of energy and structure (how many phosphates?).
ATP= fully charged (3 phosphates)
ADP= half charged (2 phosphates)
AMP = no charge (1 phosphate)
6. Compare and contrast Chemosynthesis and photosynthesis using a T-chart. Make sure you also include the organisms that carry out each process.
Both are ways to make organic compounds for energy
Chemosynthesis uses energy from chemical compounds to make their food.
- Organisms found near ocean sea vents
Photosynthesis uses energy from the sun to make their food - plants
7. Describe the difference between an autotroph and heterotroph.
Autotroph- makes own food through photosynthesis
Heterotroph- must consume food and break down through cellular respiration
8. How do producers get energy?
They are autotrophs and they get energy from the food they make through photosynthesis.

Finson,Jon Pedersen,2015-03-01 This book examines visual data use with students PK 16 as well as in pre service in service science teacher preparation Each chapter includes discussion about the current state of the art with respect to science classroom application and utilization of the particular visual data targeted by the author s discussion and explanation about the targeted visual data as applied by the author in his her classroom use of visual data as a diagnostic tool its use as an assessment tool and discussion of implications for science teaching and or science teacher preparation Although the body of research and practice in this field is growing there remains a gap in the literature about clearly explicating the use of visual data in the science classroom A growing body of literature discusses what visual data are although this topic is still viewed as being at the beginning of its development in educators thinking and there are some scattered examples of studies exploring the use of visual data in science classrooms although those studies have not necessarily clearly identified their foci as visual data per se As interest and attention has become more focused on visual data a logical progression of questioning has been how visual data are actually applied in the science classroom whether it be early elementary college or somewhere in between Visual data applications of interest to the science education community include how it is identified how it can be used with students and how students can generate it themselves how it can be employed as a diagnostic tool in concept development and how it can be utilized as an assessment tool This book explores that as well as a variety of pragmatic ways to help science educators more effectively utilize visual data and representations in their instruction
