

Fluid Mechanics: Archimedes' Principle

Boat Float

Purpose

In this experiment, you will investigate Archimedes' Principle and the principle of flotation.

Required Equipment and Supplies

spring scale
string and masking tape
600-ml. beaker
clear container or 3-gallon bucket
chunk of wood
toy boat capable of carrying a 1200-gram cargo, or 9-inch aluminum cake pan

100-g mass
triple-beam balance
rock or hook mass
500-ml. graduated cylinder
water
modeling clay
3 lead masses or lead fishing weights

DISCUSSION: Talk about what I learned: A clay 3 float and 3 sink what's the difference?

Discussion

An object submerged in water takes up space and pushes water out of the way. We say the water is displaced. Interestingly enough, the water that is pushed out of the way pushes back on the submerged object. For example, if the object pushes a volume of water with a weight of 100 N out of its way, then the water reacts by pushing back on the object with a force of 100 N—Newton's third law. We say that the object is buoyed upward with a force of 100 N. This is summed up in Archimedes' principle, which states that the buoyant force that acts on any completely or partially submerged object is equal to the weight of the fluid the object displaces.

Procedure

Step 1: Use a spring scale to determine the weight of an object (rock or hook mass) that is first out of water and then under water. The difference in weights is the buoyant force. Record.

Weight of object out of water = 250 g

Weight of object in water = 200 g

Buoyant force on object = 50 g

Alum
200 g
50 g
50 g

Step 2: Devise a method to find the volume of water displaced by the object. Record the volume of water displaced. Compute the mass and weight of this water. (Remember, 1 mL of water has a mass of 1 g and a weight of 0.01 N.)

Volume of water displaced = 600 N

Mass of water displaced = 600 N

Weight of water displaced = 6 N

250 g weight 0.01 N

This revised and updated edition offers instructions for building junior versions or snacks of the famed Exploratorium's exhibits. The snacks designed by science teachers can be used as demonstrations, labs, or as student science projects, and all 100 projects are easy to build from common materials. The Exploratorium, a renowned hands-on science museum founded by physicist and educator Frank Oppenheimer, is noted for its interactive exhibits that richly illustrate scientific concepts and stimulate learning. Offers a step-by-step guide for building dynamic science projects and exhibits. Includes tips for creating projects made from easy-to-assemble items. Thoroughly revised and updated, including new snacks, images, and references. Conceptual Physical Science Paul G. Hewitt, John Suchocki, Leslie A. Hewitt, 2004. Conceptual Physical Science, Third Edition, takes learning physical science to a new level by combining Hewitt's leading conceptual approach and friendly writing style in a new edition that provides stronger integration of the sciences, more quantitative coverage, and a wealth of new media resources to help professors in class and students out of class. The book's consistent high-quality coverage includes five new chapters on chemistry, astronomy, and earth science for an even more balanced approach to physical science. New Looking Forward and Looking Back boxes connect themes and concepts throughout the book, helping students see the big picture. More computational coverage, e.g., Figuring Physical Science in chapter calculation, allows students to practice the quantitative skills they need to master the concepts of physical science and be able to apply their knowledge. Looking Forward and Looking Back boxes in every chapter connect themes and concepts throughout the book, helping students see the big picture of physical science. Powerful media package includes a comprehensive suite of award-winning interactive online tutorials that offer students 24/7 help. A media guide. *The Genesis of General Relativity* Jürgen Renn, 2007-06-17. This four-volume work represents the most comprehensive documentation and study of the creation of general relativity. Einstein's 1912 Zurich notebook is published for the first time in facsimile and transcript and commented on by today's major historians of science. Additional sources from Einstein and others who, from the late 19th to the early 20th century, contributed to this monumental development are presented here in translation for the first time. The volumes offer detailed commentaries and analyses of these sources that are based on a close reading of these documents, supplemented by interpretations by the leading historians of relativity. *Frontiers of Fundamental Physics FFP16* Ekrem Aydiner, Burra G. Sidharth, Marisa Michelini, Christian Corda, 2024-05-17. This book is a collection of contributions presented at the 16th annual international symposium Frontiers of Fundamental Physics FFP16, supported by Istanbul University. As a document of the latest occurrence of this very important gathering, it presents the most recent advances in fundamental physics and physics teaching. For nearly fifteen years, the FFP has attracted some of the greatest physicists in the world. The broad objective of the entire endeavor

has been to enable scholars working in slightly different areas to meet on a single platform Even with this particular year s safety restrictions arising from Covid we feel that the general mission has been carried out as fully as in any year The book features addresses given by a host of expert contributors all of which are organized according to seven individual themes The areas covered include Astronomy and Astrophysics Particle Physics Theoretical Physics Gravitation and Cosmology Computational Physics Condensed Matter Physics Complex Systems and related areas This book should prove to be a veritable bounty for anyone with an interest in the continued evolution of our understanding of the physical world

Cognitive and Metacognitive Problem-Solving Strategies in Post-16 Physics Ronald Mazorodze, Michael J. Reiss, 2019-09-20 This book reports on a study on physics problem solving in real classrooms situations Problem solving plays a pivotal role in the physics curriculum at all levels However physics students performance in problem solving all too often remains limited to basic routine problems with evidence of poor performance in solving problems that go beyond equation retrieval and substitution Adopting an action research methodology the study bridges the research practical divide by explicitly teaching physics problem solving strategies through collaborative group problem solving sessions embedded within the curriculum Data were collected using external assessments and video recordings of individual and collaborative group problem solving sessions by 16 18 year olds The analysis revealed a positive shift in the students problem solving patterns both at group and individual level Students demonstrated a deliberate well planned deployment of the taught strategies The marked positive shifts in collaborative competences cognitive competences metacognitive processing and increased self efficacy are positively correlated with attainment in problem solving in physics However this shift proved to be due to different mechanisms triggered in the different students
