

Question:

In the vicinity of the earth, objects experience a force of gravitational attraction toward the center of the earth.

Which of the following statements is true?

- a. The force of gravity is proportional to the square of the distance between the object and the earth's center.
- b. The force of gravity acting on the object doesn't depend on the object's mass.
- c. If there is no object to experience a force of gravity, then the earth has no gravity field.
- d. The earth and the object both create their own gravity fields.
- e. The earth's force of gravity on the object is greater than the object's force of gravity on the earth.

Answer:

The correct answer is *d*. All objects with mass influence the space around them, and create a gravity field. Objects in the gravity field experience a force of gravitational attraction toward the center of mass of the source of gravity field.

It's important to realize although we can talk about the force of gravity acting on an object in a gravity field, the gravity field due to a mass continues to exist, even if there's no object there to experience a force. The idea of a *field* allows us to draw lines like those in the diagram above so that we can picture the effect that the field has, even when not specifically considering a moon, or an apple, or any other mass that might be in the field.
