## Exercises

## 8.1 Momentum (page 125)

1. Define momentum. the mass of an object multiplied by its velocity
2. What is the equation for momentum? momentum = mass  $\times$  velocity =  $mv$
3. A moving object can have a large momentum if it has a(n) large mass, a(n) high speed, or both.

## 8.2 Impulse Changes Momentum (pages 125–129)

4. Is the following sentence true or false? If the momentum of an object changes, either the mass or the velocity or both change.  
true
5. If a force is increased on an object, what happens to the velocity and the momentum?  
There is a greater change in velocity and momentum.
6. The change in momentum depends on the force that acts and the length of time it acts.
7. What is the short-hand notation for impulse? impulse =  $F\Delta t$
8. What is the formula that relates impulse and change in momentum?  
 $F\Delta t = \Delta(mv)$
9. Explain why a baseball player follows through with his or her swing.  
The baseball player wants to apply the greatest force possible for as long as possible so that the ball goes as far as possible.
10. Is the following sentence true or false? By hitting a soft object, such as a haystack, instead of a hard object, such as a concrete wall, you extend the contact time in which the momentum is brought to zero.  
true
11. Circle the letter of each sentence that is true about impulse and momentum.
  - a. When jumping from an elevated position down to the ground, you should keep your legs stiff to decrease the momentum.
  - ☒ b. A wrestler thrown to the floor should extend his time hitting the mat by relaxing his muscles and spreading the impulse to his foot, knee, hip, ribs, and shoulder.
  - ☒ c. When a boxer gets punched, she should move her head away from the punch to increase the contact time and reduce the force.
  - ☒ d. A dropped dish is more likely to survive a fall on carpet rather than concrete, because the softness of the carpet leads to increased contact time.

implies that if one succeeds in demonstrating convincingly the pseudo character of a problem by giving its solution the time spent on it need not be seen as wasted We conclude this section with a brief statement of the criteria for concept explication as they have been formulated in several places by Carnap Hempel and Stegmüller Hempel's account 13J Chapter 1 is still very adequate for a detailed introduction The process of explication starts with the identification of one or more vague and perhaps ambiguous concepts the so called explicanda Next one tries to disentangle the ambiguities This however need not be possible at once Ultimately the explicanda are to be replaced not necessarily one by one by certain counterparts the so called explicata which have to conform to four requirements They have to be as precise as possible and as simple as possible In addition they have to be useful in the sense that they give rise to the formulation of theories and the solution of problems The three requirements of preciseness simplicity and usefulness have of course to be pursued in all concept formation

**Conservative Reductionism** Michael Esfeld, Christian Sachse, 2011-05-09 Conservative Reductionism sets out a new theory of the relationship between physics and the special sciences within the framework of functionalism It argues that it is wrong headed to conceive an opposition between functional and physical properties or functional and physical descriptions respectively and to build an anti reductionist argument on multiple realization By contrast a all properties that there are in the world including the physical ones are functional properties in the sense of being causal properties and b all true descriptions laws theories that the special sciences propose can in principle be reduced to

physical descriptions laws theories by means of functional reduction despite multiple realization The book develops arguments for a from the metaphysics of properties and the philosophy of physics These arguments lead to a conservative ontological reductionism It then develops functional reduction into a fully fledged conservative theory reduction by means of introducing functional sub types that are coextensive with physical types illustrating that conservative reductionism by means of case studies from biology notably the relationship between classical and molecular genetics
