**Precast tunnel segments in fibre-reinforced concrete** fib Fédération Internationale du Béton, 2017-08-01 With the publication of this bulletin fib Commission 1 is initiating a new series of documents related to the use of structural concrete in underground construction where structural concrete plays a major and increasingly important role The usage of underground space is more than ever a key issue of urban planning and fib decided to start addressing the issues related to the design and construction of concrete structures in this particular environment In this context one of the most significant applications of structural concrete is tunnel lining for which the properties of reinforced concrete are particularly well suited through compressive strength water tightness ductility and durability Reinforced concrete tunnels linings have mostly been traditionally cast in situ but the development of Tunnel Boring Machines has led to the invention of precast concrete segmental lining technology which is nowadays one of the most promising applications of Fibre Reinforced Concrete FRC Thanks to the courage and dedication of innovative designers and contractors a number of large tunnels have already been built around the World with FRC precast linings and this report presents the experience acquired with these projects and also provides guidance about the way to apply 2010 fib Model Code recommendations on FRC to these structures The main drivers of this evolution from RC to FRC are a better ductility more durability and easier fabrication and construction process As Commission 1 chair I am very grateful to Alberto Meda and to all members of this task group for opening the way to this new field of underground structures within our commission and to have efficiently

**Sprayed Concrete Lined Tunnels** Alun Thomas,2019-08-20 Sprayed concrete lined SCL tunnels are growing rapidly in popularity due to their versatility The design and construction of both hard rock and soft ground tunnels has been revolutionised by the advent of the SCL method and now the use of permanent sprayed concrete linings has unlocked the true potential of the method to minimise construction costs and times Yet the complex early age behaviour of the sprayed concrete makes the design difficult and requires a robust management system during construction Consequently the great advantages of the method must be balanced against the risks as a few high profile tunnel collapses have illustrated Practising engineers on site in the design office or in client organizations will find this book an excellent introduction It covers all aspects of SCL tunnelling from the constituents of sprayed concrete to detailed design and management during construction Although there is a close interdependence between all the facets of sprayed concrete few engineers have the right breadth of experience and expertise to cover all of them This urgently needs to be transferred to the wider engineering community as SCL tunnels play an increasingly important role in the delivery of the underground infrastructure which modern urban life demands In this second edition beyond a general updating to reflect new developments the sections on permanent sprayed concrete the innovative technology of spray applied waterproofing membranes fibre reinforcement both steel and macrosynthetic and composite lining design have been expanded Sustainability and environmental impact are addressed in a new section

Ground Characterization and Structural Analyses for Tunnel Design Benjamín Celada,Z.T. Bieniawski,2019-08-06 This practical and design oriented book focuses on ground characterization and structural calculation as part of the active structural design methodology With a focus on rock tunnelling it offers a comprehensive rather than a topic based perspective deriving sound tunnel design criteria and methods from basic principles Ground characterization includes excavations site investigation and in situ stress determination culminating in geotechnical classifications The book then deals with various construction methods and their appropriate calculations which range from constitutive models for the

stress strain behaviour of an excavation and tunnel support elements to a full stress strain analysis methodology The heavily practical approach of the book draws on the authors twenty years of tunnelling experience in Spain and South America It will help any young or established professional who wants to develop a career in the underground field across both civil engineering and geology As it incorporates the very fundamentals of tunneling design it can be used as a support for tunneling courses or as a textbook for master s and PhD courses Benjam n Celada was Chief Tunnel Engineer at Hunosa and Potasas de Navarra S A before founding Geocontrol S A He has also worked for twenty years as Professor of Underground Works at the Polytechnic Mining University in Madrid Spain Z T Bieniawski directed the Rock Mechanics Department of the Council for Scientific and Industrial Research in Pretoria then taught at the Pennsylvania State University for twenty years
