Free Will and Consciousness Roy Baumeister, Alfred Mele, Kathleen Vohs,2010-07-09 This volume is aimed at readers who wish to move beyond debates about the existence of free will and the efficacy of consciousness and closer to appreciating how free will and consciousness might operate It draws from philosophy and psychology the two fields that have grappled most fundamentally with these issues In this wide ranging volume the contributors explore such issues as how free will is connected to rational choice planning and self control roles for consciousness in decision making the nature and power of conscious deciding connections among free will consciousness and quantum mechanics why free will and consciousness might have evolved how consciousness develops in individuals the experience of free will effects on behavior of the belief that free will is an illusion and connections between free will and moral responsibility in lay thinking Collectively these state of the art chapters by accomplished psychologists and philosophers provide a glimpse into the future of research on free will and consciousness

Kalueff,2017-02-06 Animal models and tests have become increasingly important for biomedical research enabling a better understanding of pathogenic pathways involved in various human disorders Over the last decades zebrafish Danio rerio have become a very popular model organism in biomedical research Recently this fish has entered the waters of neuroscience and biological psychiatry quickly becoming an indispensable model species in this field With a high genetic homology to humans 75% based on coding regions it is not surprising that humans and fish are very similar physiologically and behaviorally Therefore it should not come as a surprise that zebrafish can be an excellent model of human neuropsychiatric disorders While some classical psychiatrists may not too easily be persuaded by this generalization the current book *The rights and wrongs of zebrafish principles of behavioral phenotyping and CNS disease modeling* explains in a domain by domain manner how exactly zebrafish models can be used to target a wide range of human brain disorders and aberrant phenotypes The contributors to this book are leading international scholars whose work spearheads innovative zebrafish neuroscience research around the world Written by top experts in the field this book makes for a useful balanced and up to date reading that outlines the use of zebrafish to study the pathological mechanisms underlying neuropsychiatric disorders **Unconscious information processing in executive control** Nicola De Pisapia, The aim of this Frontiers Research Topic is to review and further explore the topic of unconscious processing in executive control Executive control refers to the ability of the human brain mostly associated with prefrontal cortex activity to regulate the processing involved in the execution of novel or complex goal directed tasks Previous studies or models of human cognition have assumed that executive control necessarily requires conscious processing of information This perspective is in line with common sense and personal introspection which suggest that our choices are intentional and based on conscious stimuli Nevertheless in the last few years several behavioural and cognitive neuroscience studies have put under scrutiny this assumption Cumulating evidence is now showing that prefrontal executive control can involve or be triggered by unconscious processing of information with consequent effects on observed behaviours One of the main methods adopted to study such unconscious mechanisms is masked priming consisting in presenting visually

masked stimuli which nonetheless are shown to affect goal directed behaviour or influence constructs linked to executive control and prefrontal cortex activity e g task set representation response inhibition conflict monitoring error detection reward processing emotion regulation and task switching This area of research is relatively young and while scientific evidence is emerging no general consensus has been reached yet on how to interpret these early findings some researchers accept that executive control can involve unconscious processing others momentarily put aside in first approximation this issue others criticize this possibility on theoretical grounds e g pointing to the need of better definitions of terms such as control conflict and consciousness or based on experimental findings At this stage it appears necessary that researchers in the field make a collective effort to deepen the understanding of the unconscious mechanisms involved in executive control This Research Topic will focus on neuroscience but it will welcome contributions on purely behavioural and psychophysiological studies patient reports computational investigations as well as philosophical and historical analyses of the relationship between executive control and consciousness In particular we encourage experts in this field to submit contributions in the form of a reviews opinions and discussions on existing literature concerning unconscious processing of information in executive control b original research articles both behavioural only and neuroimaging studies on unconscious processing of information in executive control c discussions and opinions on new methodologies to investigate this issue e g other than masked priming which has been the technique of choice in most of the existing studies Encyclopedia of Consciousness: A-L ; Vol. 2, M-Z William P. ECKM2015-16th European Conference on Knowledge Management Maurizzio Massaro and Andrea Garlatti,2015-09-02

These proceedings represent the work of researchers presenting at the 16th European Conference on Knowledge Management ECKM 2015 We are delighted to be hosting ECKM at the University of Udine Italy on the 3 4 September 2015 The conference will be opened with a keynote from Dr Madelyn Blair from Pelerei Inc USA on the topic The Role of KM in Building Resilience On the afternoon of the first day Dr Daniela Santarelli from Lundbeck Italy will deliver a second keynote speech The second day will be opened by Dr John Dumay from Macquarie University Sydney Australia ECKM is an established platform for academics concerned with current research and for those from the wider community involved in Knowledge Management to present their findings and ideas to peers from the KM and associated fields ECKM is also a valuable opportunity for face to face interaction with colleagues from similar areas of interests The conference has a well established history of helping attendees advance their understanding of how people organisations regions and even countries generate and exploit knowledge to achieve a competitive advantage and drive their innovations forward The range of issues and mix of approaches followed will ensure an interesting two days 260 abstracts were initially received for this conference However the academic rigor of ECKM means that after the double blind peer review process there are 102 academic papers 15 PhD research papers 1 Masters research papers and 7 Work in Progress papers published in these Conference Proceedings These papers reflect the continuing interest and diversity in the field of Knowledge Management and they represent truly global research from many different countries including Algeria Austria Bosnia and Herzegovina Brazil Canada Chile Colombia Cuba Cyprus Czech Republic Estonia Finland France France Germany Hungary India Indonesia Iran Ireland Italy Japan Jordan Kenya Lithuania Mexico Nigeria Norway Pakistan Poland Portugal Romania Russia Slovakia Slovenia South Africa Spain Sri Lanka Sultanate of Oman Sweden Switzerland Thailand The Netherlands UK United Arab Emirates USA and Venezuela

The Labyrinths of Love Lee Irwin, 2019-10-09 Labyrinths of Love is an interdisciplinary examination of the self psyche and soul providing a comparative analysis from religious paranormal research and transpersonal theory perspectives The book addresses ontological questions regarding the nature of the self in relationship to both psyche and soul each differentiated to reveal attributes that are transphysical and commonly recognized in most religious traditions The role of dreams imagination and paranormal perceptions as well contribute to a more fully realized sense of identity A constructive use of pansentient ontology illuminates how human identity can incorporate transphysical aspects of self into a meaningful theory of self development and evolutionary becoming The work creates a unique synthesis that unfolds what it means to be human and demonstrates a visionary epistemology of the self

Exploring the Illusion of Free Will and Moral Responsibility Gregg D. Caruso, 2013-07-05 Exploring the Illusion of Free Will and Moral Responsibility investigates the philosophical and scientific arguments for free will skepticism and their implications Skepticism about free will and moral responsibility has been on the rise in recent years In fact a significant number of philosophers psychologists and neuroscientists now either doubt or outright deny the existence of free will and or moral

responsibility and the list of prominent skeptics appears to grow by the day Given the profound importance that the concepts of free will and moral responsibility hold in our lives in understanding ourselves society and the law it is important that we explore what is behind this new wave of skepticism It is also important that we explore the potential consequences of skepticism for ourselves and society Edited by Gregg D Caruso this collection of new essays brings together an internationally recognized line up of contributors most of whom hold skeptical positions of some sort to display and explore the leading arguments for free will skepticism and to debate their implications

Compendium of Neurosymbolic Artificial Intelligence P. Hitzler, Md Kamruzzaman Sarker, Aaron Eberhart, 2023-08-04 If only it were possible to develop automated and trainable neural systems that could justify their behavior in a way that could be interpreted by humans like a symbolic system The field of Neurosymbolic AI aims to combine two disparate approaches to AI symbolic reasoning and neural or connectionist approaches such as Deep Learning The quest to unite these two types of AI has led to the development of many innovative techniques which extend the boundaries of both disciplines This book Compendium of Neurosymbolic Artificial Intelligence presents 30 invited papers which explore various approaches to defining and developing a successful system to combine these two methods Each strategy has clear advantages and disadvantages with the aim of most being to find some useful middle ground between the rigid transparency of symbolic systems and the more flexible yet highly opaque neural applications The papers are organized by theme with the first four being overviews or surveys of the field These are followed by papers covering neurosymbolic reasoning neurosymbolic architectures various aspects of Deep Learning and finally two chapters on natural language processing All papers were reviewed internally before publication The book is intended to follow and extend the work of the previous book Neuro symbolic artificial intelligence The state of the art IOS Press 2021 which laid out the breadth of the field at that time Neurosymbolic AI is a young field which is still being actively defined and explored and this book will be of interest to those working in AI research and development
