Assessment in Online and Blended Learning Environments Selma Koç, Xiongyi Liu, Patrick Wachira, 2015-03-01 Online and blended learning requires the reconstruction of instructor and learner roles relations and practices in many aspects Assessment becomes an important issue in non traditional learning environments Assessment literacy i.e understanding assessment and assessment strategies is critical for both instructors and students in creating online and

blended environments that are effective for teaching and learning. Instructors need to identify and implement assessment strategies and methods appropriate to online or blended learning. This includes an understanding of the potential of a variety of technology tools for monitoring student learning and improving their teaching effectiveness. From the students perspective good assessment practices can show them what is important to learn and how they should approach learning hence engaging them in goal oriented and self regulatory cognitions and behaviors. The book targets instructors instructional designers and educational leaders who are interested in understanding and implementing either summative or formative assessment in online and blended learning environments. This book will assist the relevant audience in the theory and practice of assessment in online and blended learning environments. Providing both a research and practice perspective this book can help instructors make the connection between pedagogy and technology tools to maximize their teaching and student learning. Among the questions addressed in this book are: What assessment strategies can be used in online or blended learning? How can instructors design effective assessment strategies? What methods or technology tools can be used for assessment in online or blended learning? How does peer assessment work in online or blended learning environments?

Computer-Based Instruction in Military Environments Robert J. Seidel, P.D. Weddle, 2012-12-06. This collection of papers is the result of a symposium sponsored by NATO's Defense Research Group Panel VIII in the Spring of 1985. The symposium came into being when it became obvious to the NATO countries that research development and utilization of advanced technologies for training was the best means of increasing both training effectiveness and efficiency. This symposium was the second in a series of three devoted to training. The series was structured to cover all aspects of training. The first series addressed the value of training, the second one dealt with the application of training technologies and the third and last of the series focused on academic issues concerned with the effect of prior learning on subsequent learning. The fact that a major American publisher has determined that computer based instruction is the technology of greatest interest to the NATO community is not surprising. Advances in microprocessor technology have revolutionized both how and where we train. During this symposium there were a limited number of carefully chosen exhibits to demonstrate the various applications of computer based training techniques. In the following papers you will find both a practical and scientific basis for the way current and future training and training systems should be designed, applied and utilized. We know that training must be done faster and more effectively. Resources in Education, 1995.
