Computers In Linguistics:

Using Computers in Linguistics Helen Aristar Dry, John Lawler, 2002-09-11 Computing has had a dramatic impact on the discipline of linguistics and is shaping the way we conceptualize both linguistics and language Using Computers in Linguistics provides a non technical introduction to recent developments in linguistic computing and offers specific guidance to the linguist or language professional who wishes to take advantage of them Divided into eight chapters each of the expert contributors focus on a different aspect of the interaction of computing and linguistics looking either at computational resources the Internet software for fieldwork and teaching linguistics Unix utilities or at computational developments the availability of electronic texts new methodologies in natural language processing the development of the CELLAR computing environment for linguistic analysis Language and Machines ALPAC (Organization), 1966 **Language and computers** Markus Dickinson, Lelia Glass, Chris Brew, Detmar Meurers, 2024-08-19 This book offers an accessible introduction to the ways that language is processed and produced by computers a field that has recently exploded in interest The book covers writing systems tools to help people write computer assisted language learning the multidisciplinary study of text as data text classification information retrieval machine translation and dialog Throughout we emphasize insights from linguistics along with the ethical and social consequences of emerging technology This book welcomes students from diverse intellectual backgrounds to learn new technical tools and to appreciate rich language data thus widening the bridge between linguistics and computer science *Computers in Linguistics* Christopher Butler, 1985 **Computers in Applied Linguistics** Martha C. Pennington, Martha Carswell Pennington, Vance Stevens, 1992 The book combines in one volume information on specific computer applications with discussion of theoretical and methodological issues by recognized authorities in linguistics language teaching and second language acquisition It will be of value to linguists teachers researchers and software designers working in English or in other languages Computers in Language Research 2 Walter A. Sedelow, Sally Yeates Sedelow, 1983 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language The series publishes state of the art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by approaching language from an interdisciplinary perspective TRENDS IN LINGUISTICS considers itself a forum for cutting edge research based on solid empirical data on language in its various manifestations including sign languages It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints High quality standards are ensured through anonymous reviewing *Language and Computers* Geoff Barnbrook, 1996 This book is the first introduction to the practical problems and benefits of corpus based language research It provides the basic tool kit for

anyone approaching corpus based research for the first time from a variety of disciplines **Computers and Languages** A. Nijholt, 2014-06-28 A global introduction to language technology and the areas of computer science where language technology plays a role Surveyed in this volume are issues related to the parsing problem in the fields of natural languages programming languages and formal languages Throughout the book attention is paid to the social forces which influenced the development of the various topics Also illustrated are the development of the theory of language analysis its role in compiler construction and its role in computer applications with a natural language interface between men and machine Parts of the material in this book have been used in courses on computational linguistics computers and society and formal approaches to languages *Linguistics, Computers, and the Language Teacher* John Harvey Underwood, 1984

Computer-Mediated Communication for Linguistics and Literacy: Technology and Natural Language Education Bodomo, Adams B., 2009-07-31 This book investigates the way humans communicate through the medium of information technology gadgets focusing on the linguistic literacy and educational aspects of computer mediated communication Provided by publisher *Language and computers* Lelia Glass, Markus Dickinson, Chris Brew, Detmar Meurers, 2024-08-19 This book offers an accessible introduction to the ways that language is processed and produced by computers a field that has recently exploded in interest The book covers writing systems tools to help people write computer assisted language learning the multidisciplinary study of text as data text classification information retrieval machine translation and dialog Throughout we emphasize insights from linguistics along with the ethical and social consequences of emerging technology This book welcomes students from diverse intellectual backgrounds to learn new technical tools and to appreciate rich language data thus widening the bridge between linguistics and computer science **Computers and Human Language** George William Smith, 1991 Offering an inquiry into the nature of language from the perspective of computing Computers and Human Language synthesizes recent research in linguistics computer science and experimental psychology as it explores the major computational approaches to language especially the modeling of processes by which language is comprehended Among the topics considered are the computationally symbolic basis of language lexicons as repositories of information automated text processing phonology phototactics speech synthesis and the persisting challenge of continuous speech transformational grammars and their successors linguistic and conceptual approaches to sentence meaning and discourse coherence and plan based bridging inferences The book also explores such up to the minute subjects as neurally inspired computing parsing and psychological plausibility the controversial representation hypothesis and the ramifications of discourse focus With its clear engaging style and gradual systematic exposition Computers and Human Language makes the fast moving world of computational linguistics accessible to the non specialist reader **Human Language Technology Challenges for Computer Science and Linguistics** Zygmunt Vetulani, Joseph Mariani, 2014-07-25 This book constitutes the refereed proceedings of the 5th Language and Technology Conference Challenges for Computer Science and Linguistics LTC 2011

held in Poznan Poland in November 2011 The 44 revised and in many cases substantially extended papers presented in this volume were carefully reviewed and selected from 111 submissions The focus of the papers is on the following topics speech parsing computational semantics text analysis text annotation language resources general issues language resources ontologies and Wordnets and machine translation Computers in Applied Linguistics and Language Teaching Gesellschaft für Angewandte Linguistik, Jahrestagung, 1988 A great many of the papers in this volume were first read at the Annual Meeting of the German Association of Applied Linguistics GAL which took place at Heidelberg University from 1-3 October 1987 Dr Jung he is Head of the Educational Technology Section of GAL and Convenor of CETaLL AILA's Scientific Commission on Educational Technology and Language Learning took the opportunity to enlarge this basic stock by inviting internationally recognized scholars to contribute articles on topics which were not or only sparingly represented at the GAL meeting With reports on the situation of CALL in more than 10 countries around the world a comprehensive glossary of terms and articles on hardware and software in both research and practice the result comes very close to a CALL Handbook

Human Language Technology. Challenges for Computer Science and Linguistics Zygmunt Vetulani, 2011-04-13 This book constitutes the refereed proceedings of the 4th Language and Technology Conference Challenges for Computer Science and Linguistics LTC 2009 held in Poznan Poland in November 2009 The 52 revised and in many cases substantially extended papers presented in this volume were carefully reviewed and selected from 103 submissions The contributions are organized in topical sections on speech processing computational morphology lexicography parsing computational semantics dialogue modeling and processing digital language resources WordNet document processing information processing and machine translation Foundations of Computational Linguistics Roland R. Hausser, 2001 The central task of a future oriented computational linguistics is the development of cognitive machines which humans can freely talk with in their respective natural language In the long run this task will ensure the development of a functional theory of language an objective method of verification and a wide range of practical applications Natural communication requires not only verbal processing but also non verbal perception and action Therefore the content of this textbook is organized as a theory of language for the construction of talking robots The main topic is the mechanism of natural language communication in both the speaker and the hearer The content is divided into four parts Theory of Language Theory of Grammar Morphology and Syntax Semantics and Pragmatics The book contains more than 700 exercises for reviewing key ideas and important problems In the Second Edition changes are most noticeable in Chapters 22-24 which have been completely rewritten They present a declarative outline for programming the semantic and pragmatic interpretation of natural language communication The presentation is now simpler and more comprehensive It is defined as a formal fragment and includes a new control structure an analysis of spatio-temporal inferencing and an analysis of internal matching based on the notion of a task analysis Examples and explanations which were contained in the old versions of Chapters 22-24 have been moved to the new Appendix A schematic

summary and a conclusion have been added as well

Human Language Technology. Challenges for Computer Science and Linguistics Zygmunt Vetulani, Hans Uszkoreit, Marek Kubis, 2016-07-30 This book constitutes the refereed proceedings of the 6th Language and Technology Conference Challenges for Computer Science and Linguistics LTC 2013 held in Pozna Poland in December 2013 The 31 revised and in many cases substantially extended papers presented in this volume were carefully reviewed and selected from 103 submissions The papers selected to this volume belong to various fields of Human Language Technologies and illustrate a large thematic coverage of the LTC conferences To make the presentation of the papers possibly transparent we have structured them into 9 chapters These are Speech Processing Morphology Parsing Related Issues Computational Semantics Digital Language Resources Ontologies and Wordnets Written Text and Document Processing Information and Data Extraction and Less Resourced Languages

Computers and Translation Harold Somers, 2003-05-28 This volume is about computers and translation It is not however a Computer Science book nor does it have much to say about Translation Theory Rather it is a book for translators and other professional linguists technical writers bilingual secretaries language teachers even which aims at clarifying explaining and exemplifying the impact that computers have had and are having on their profession It is about Machine Translation MT but it is also about Computer Aided or Assisted Translation CAT computer based resources for translators the past present and future of translation and the computer The editor and main contributor Harold Somers is Professor of Language Engineering at UMIST Manchester With over 25 years experience in the field both as a researcher and educator Somers is editor of one of the field s premier journals and has written extensively on the subject including the field s most widely quoted textbook on MT now out of print and somewhat out of date The current volume aims to provide an accessible yet not overwhelmingly technical book aimed primarily at translators and other users of CAT software

Computing Meaning Harry Bunt, Reinhard Muskens, 2009-09-03 This book provides an in depth view of the current issues problems and approaches in the computation of meaning as expressed in language Aimed at linguists computer scientists and logicians with an interest in the computation of meaning this book focuses on two main topics in recent research in computational semantics The first topic is the definition and use of underspecified semantic representations i e formal structures that represent part of the meaning of a linguistic object while leaving other parts unspecified The second topic discussed is semantic annotation Annotated corpora have become an indispensable resource both for linguists and for developers of language and speech technology especially when used in combination with machine learning methods The annotation in corpora has only marginally addressed semantic information however since semantic annotation methodologies are still in their infancy This book discusses the development and application of such methodologies

Foundations of Computational Linguistics Roland Hausser, 2014-03-31 The central task of a future oriented computational linguistics is the development of cognitive machines which humans can freely talk with in their respective natural language In the long run this task will ensure the development of a functional theory of
