Mazibuko-Makena: Leap 4 Zamanzima Mazibuko-Makena,Erika Kraemer-Mbula.,2021-04-09 Leap 4 0 African Perspectives on the Fourth Industrial Revolution seeks to identify the challenges and opportunities the 4IR presents to South Africa and the rest of the African continent especially to workers and marginalised sectors of society Authors examine the prerequisites for the successful introduction of the 4IR including infrastructure skilled personnel and appropriate regulation They underline the importance of inclusive innovation with a deliberate objective to create net new jobs and reduce inequality The 4IR is well established in many parts of the world with technological advances driving profound social and economic change However for many developing countries particularly countries in Africa the 4IR may not offer the anticipated leap forward There is a danger that the continent may find itself dictated to by experiences that are not in tune with its social contexts

Applying Theories for Information Systems Research Tiko Iyamu,2021-09-26 This book sets out to provide postgraduate researchers with guidance on selecting and applying sociotechnical theories to the study of information systems including how they can be combined to complement each other Until now it has been difficult to source advice on the application of these theories and there has been no single book that combines multiple theories as this does Examining the impacts of technological developments and

seeking to understand how humans interact with computers and systems is a dynamic field but can often confuse researchers with the overwhelming number of social theories that are utilised to derive insights. Instead, the author in this book breaks down some of the most popular theories used to underpin information system research such as activity theory, AT, actor network theory, ANT, contingency theory, CT, diffusion of innovation, DOI, theory of structuration, ST, and the technology acceptance model, TAM. By doing so, this book serves to enable a simpler, faster selection of appropriate theories and a more effective and productive application that leads to richer, more rigorous research outcomes. Written for postgraduate researchers and academics in the fields of information technology and information systems, this book provides a valuable resource of sociotechnical research methodologies that will enable and enhance future studies.

Handbook of Research on Autopoiesis and Self-Sustaining Processes for Organizational Success Pa?kowska, Ma?gorzata, 2021-01-29 Autopoietic systems show a remarkable property in the way they interact with their environment: on the one hand, building blocks and energy (including information) are exchanged with the environment, which characterizes them as open systems; on the other hand, any functional mechanisms (the way the system processes information, incorporates building blocks, and responds to information) are totally self-determined and cannot be controlled by interventions from the environment. Information systems in an organization seem to accept the autopoietic system way of development and can help managers to understand the operations of their organizations better. The Handbook of Research on Autopoiesis and Self-Sustaining Processes for Organizational Success is an innovative reference book that presents the meaning of autopoietic organizations for social and information science, examines how autopoietic organizations are information self-producing and self-controlled, and provides a framework for its development in modern organizations. The book focuses on analyzing autopoiesis features such as self-managing, self-sustaining, self-producing, self-regulating, etc. Moreover, as the aforementioned characteristics receive a new interpretation in IT environments, the book also includes an

exploration of IT solutions that enable the development of these characteristics This book is ideal for professionals academicians researchers and students working in the field of information economics and management in various disciplines such as information and communication sciences administrative sciences and management education computer science and information technology
