    - Fake science
    - Lacks the key ingredient of evidence, and having a test for wrongness
  - Scientific methods
    - Principles and procedures for the systematic pursuit of knowledge involving the recognition and formulation of a problem, the collection of data through observation and experiment, and the formation and testing of hypotheses
  - Fact
    - A close agreement by competent observers who make a series of observations about the same phenomenon; can change by making better observations
  - Hypothesis
    - An educated guess, that is tested by using it to make predictions and then making measurements to compare with those predictions

    - Natural motion
      - Every object in the universe has its proper place, determined by what it is made up of, some combination of these "elements"; earth, water, air, fire. Any object not in its proper place will strive to get there. If the object is on earth, it will move straight up or down
    - Violent motion
      - Produced by external pushes or pulls on objects, causing motion that is different than the natural motion
  - Galileo
    - Discovered that objects of different weights fall to the ground at the same time in the absence of **air resistance**.
    - Using inclined planes he discovered that an object needs no force to keep it moving in the absence of **friction**
    - Introduced the concept of **inertia**
      - **Inertia**- the property of matter to resist change in its motion; can be measured by its mass

impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
