Conceptual Designing Aggregate Structural Applications:

A Conceptual Model for Designing Recycled Aggregate Concrete for Structural Applications Marco Pepe, 2015-12-12 This book reports on the physical and mechanical characterization of Recycled Aggregate Concrete RAC produced through a partial to total replacement of ordinary aggregates with what have been dubbed Recycled Concrete Aggregates RCAs It proposes a theoretical framework for understanding the relationships between RCAs and RCA and for predicting the resulting behavior of RAC The book demonstrates that in the case of RAC two additional parameters have to be taken into account than with ordinary aggregates due to the composite nature and higher porosity of RCAs By extending Abrams Law for Recycled Aggregate Concrete it represents a first step in the formulation of a general model for predicting the properties of RAC The theoretical approach presented here addresses an important gap in the literature and is expected to stimulate new research on the use of this more sustainable form of concrete in structural applications **New Trends in Recycled**

Aggregate Concrete Jorge de Brito, Chi Sun Poon, Baojian Zhan, 2019-07-15 This book is the result of a Special Issue published in Applied Sciences entitled New Trends in Recycled Aggregate Concrete It identifies emerging research areas within the field of recycled aggregate concrete and contributes to the increased use of this eco efficient material Its contents are organised in the following sections Upscaling the use of recycled aggregate concrete in structural design Large scale applications of recycled aggregate concrete Long term behaviour of recycled aggregate concrete Performance of recycled aggregate concrete in very aggressive environments Reliability of recycled aggregate concrete structures Life cycle assessment of recycled aggregate concrete New applications of recycled aggregate concrete **Building-Construction**

Design - From Principle to Detail José Luis Moro, 2024-02-19 Construction is the means by which designing architects and engineers transform a design idea into built reality It is from this perspective that the subject of building construction design is dealt with by the architect Jos Luis Moro in three comprehensive volumes Each is dedicated to the methodological physical and functional fundamentals the conception of a constructional solution and finally its implementation in the constructional detail Not only do the three volumes provide extensive content they also ensure the greatest possible clarity in the text and graphics in order to make it easier for learners to access the material Importantly they focus not only on conveying technical and scientific information but also on demonstrating the complex relationships and interactions between design material and construction Great importance was attached to developing consistent overarching and meaningful correlations between the numerous and highly diverse topics covered After an introduction to planning theory topics Volume 1 Fundamentals addresses sustainability issues in the context of constructional design This is followed by a discussion of the most important material related considerations and their consequences for the constructional application of the materials The range of currently available industrial building products is also presented Furthermore the essential requirements and functions that building structures must fulfill from a structural building physics building acoustics and fire protection perspective are

examined In closing the book considers questions of durability

Conceptual Modeling Juan C. Trujillo, Karen C. Davis, Xiaoyong Du, Zhanhuai Li, Tok Wang Ling, Guoliang Li, Mong Li Lee, 2018-09-25 This book constitutes the refereed proceedings of the 37th International Conference on Conceptual Modeling ER 2018 held in Xi'an, China in October 2018. The 30 full and 13 short papers presented together with 3 keynotes were carefully reviewed and selected from 151 submissions. This event covers a wide range of following topics: Conceptual modeling, studies, ontological modeling, semi-structured data modeling, process modeling and management, spatio-temporal modeling, cloud-based modeling, schema and view modeling, languages and models, NoSQL modeling, conceptual modeling for machine learning and reasoning, applications of conceptual modeling.

Proceedings of Italian Concrete Conference 2022 Maria Antonietta Aiello, Antonio Bilotta, 2023-09-14 This book gathers the best peer-reviewed papers presented at the Italian Concrete Conference held in Naples, Italy, on October 12-15, 2022. The conference topics encompass the aspects of design, execution, rehabilitation, and control of concrete structures with particular reference to theory and modeling, applications, and realizations, materials, and investigations, technology, and construction techniques. The contributions amply demonstrate that today's structural concrete applications concern not only new constructions but more and more rehabilitation, conservation, strengthening, and seismic upgrading of existing premises and that requirements cover new aspects within the frame of sustainability, including environmental friendliness, durability, adaptability, and reuse of works and/or materials. As such, the book represents an invaluable up-to-the-minute tool providing an essential overview of structural concrete as well as all new materials with cementitious matrices.

Automation in Construction toward Resilience Ehsan Noroozinejad Farsangi, Mohammad Noori, Tony T.Y. Yang, Paulo B. Lourenço, Paolo Gardoni, Izuru Takewaki, Eleni Chatzi, Shaofan Li, 2023-09-29 While the word automation may conjure images of robots taking over jobs, the reality is much more nuanced. In construction, for instance, automation is less likely to diminish employment opportunities than it is to increase productivity. Indeed, automation alongside the global need for new and updated infrastructure and better and more affordable housing can help shape the direction of the construction industry. The key will be anticipating and preparing for the shift in part by developing new skills in the current and future workforce. This book presents all aspects of automation in construction, pertaining to the use of information technologies in design, engineering, construction technologies, and maintenance and management of constructed facilities. The broad scope encompasses all stages of the construction life cycle, from initial planning and design through the construction of the facility, its operation and maintenance, to the eventual dismantling and recycling of buildings and engineering structures. Features: Examines Building Information Management systems allowing on-site execution of construction more efficiently and for project teams to eliminate mistakes and better coordinate the workforce. Presents the latest information on the automation of modular construction production in factories, including 3D printing of components such as facades or even load-bearing and essential components.

Sustainable Construction Materials Ravindra K. Dhiri OBE, Jorge de Brito, Rui V. Silva, Chao Qun Lye, 2019-01-05

Sustainable Construction Materials Recycled Aggregate focuses on the massive systematic need that is necessary to encourage the uptake of recycled and secondary materials RSM in the construction industry This book is the fifth and the last of the series on sustainable construction materials and like the previous four it is also different to the norm Its uniqueness lies in using the newly developed Analytical Systemisation Method in building the data matrix sourced from 1413 publications contributed by 2213 authors from 965 institutions in 67 countries from 1977 to 2018 on the subject of recycled aggregate as a construction material and systematically analysing evaluating and modelling this information for use of the material as an aggregate concrete and mortar geotechnics and road pavement applications Environmental issues case studies and standards are also discussed The work establishes what is already known and can be used to further progress the use of sustainable construction materials It can also help to avoid repetitive research and save valuable resources The book is structured in an incisive and easy to digest manner and is particularly suited for researchers academics design engineers specifiers contractors and government bodies dealing with construction works Provides an exhaustive and comprehensively organized list of globally based published literature spanning 5000 references Offers an analysis evaluation repackaging and modeling of existing knowledge that encourages more responsible use of waste materials Provides a wealth of knowledge for use in many sectors relating to the construction profession including academia research practice and adoption of RSM

Concrete Recycling Francois de Larrard, Horacio Colina, 2019-03-04 The concrete industry consumes thirty billion tons of aggregate annually almost all from non renewable natural sources Demolition produces a growing amount of materials which are legally usable and readily available If not used locally they must be transported and landfilled Also demolition generally takes place close to new construction sites recycling promotes shorter transportation distances a must for improving the overall environmental footprint of the construction world This book encompasses all aspects of this current trend How recycled aggregates are obtained and their properties Improving their quality through phase selection or separation Incorporating concrete from demolition into the cement production process and the properties of the product obtained What are the properties of concrete incorporating recycled concrete aggregates at various replacement levels throughout the lifecycle of the material from the fresh state to the long term including durability and fire How recycled concrete can be optimised for various uses How this new structural material can be managed in reinforced concrete construction Solid experience from a series of experimental sites and drawing on the Recyb ton project which lasted more than 5 years and gathered about 50 partners from both academia and industry Specific issues in recycled concrete quality control National practices in the most advanced countries and the main national and European standards Achieving a sustainable process High Tech Concrete: Where Technology and Engineering Meet D.A.
