multidimensional multi effects way By the end the reader will be aware of the whole global issues to care about for various pavement technical features around the world among which the implications of modelling including data collection challenging resources saving and infrastructures services optimisation This is a complete and varied work rare in the domain

Dr Agnes Jullien Research Director Director of Environmental Development Safety and Eco Design Laboratory EASE Department of Development Mobility and Environment Ifsttar Centre de Nantes Cedex France An excellent compilation of latest developments in the field of sustainable pavements The chapter topics have been carefully chosen and are very well organized with the intention of equipping the reader with the state of the art knowledge on all aspects of pavement sustainability Topics covered include pavement Life Cycle Analysis LCA pervious pavements cool pavements photocatalytic pavements energy harvesting pavements etc which will all be of significant interest to students researchers and practitioners of pavement engineering This book will no doubt serve as an excellent reference on the topic of sustainable pavements Dr Wei Hsing Huang Editor in Chief of International Journal of Pavement Research and Technology IJPRT and Professor of Civil Engineering National Central University Taiwan

Mix Design Practices for Warm Mix Asphalt Ramon Francis Bonaquist, Advanced Asphalt Technologies, LLC., 2011 TRB's National Cooperative Highway Research Program NCHRP Report 691 Mix Design Practices for Warm Mix Asphalt explores a mix design method tailored to the unique material properties of warm mix asphalt technologies Warm mix asphalt WMA refers to asphalt concrete mixtures that are produced at temperatures approximately 50 F 28 C or more cooler than typically used in the production of hot mix asphalt HMA The goal of WMA is to produce mixtures with similar strength durability and performance characteristics as HMA using substantially reduced production temperatures There are important environmental and health benefits associated with reduced production temperatures including lower greenhouse gas emissions lower fuel consumption and reduced exposure of workers to asphalt fumes Lower production temperatures can also potentially improve pavement performance by reducing binder aging providing added time for mixture compaction and allowing improved compaction during cold weather paving Appendices to NCHRP Report 691 include the following Appendices A B and D are included in the printed and PDF version of the report Appendices C and E are available only online

Investigation of Testing Methods to Determine Long-term Durability of Wisconsin Aggregates, 2013 Approximately 10 to 11 million tons of aggregates are utilized in transportation infrastructure projects in Wisconsin annually The quality of aggregates has a tremendous influence on the performance and durability of roadways and bridges In this Phase II research study detailed statistical analyses were performed on over 1 000 sets of historical aggregate test results and the experimental results from the Phase I study Test results from other states were analyzed as well Aggregate tests were performed on 12 known marginal or poor Wisconsin aggregates to specifically address test performance of such aggregates Selected aggregates were scanned using X ray computed tomography to assess the effects of freeze thaw and sodium sulfate exposure on the internal void system The results of multi parameter logistic

regression analyses show that the pass fail outcomes of the Micro Deval test can be predicted when LA abrasion absorption and sodium sulfate soundness test results are known The unconfined freeze thaw test outcomes cannot be predicted from results of other tests not correlated Therefore the unconfined freeze thaw test should be part of any test protocol as it measures an aggregate characteristic that cannot be obtained from other tests The percentiles associated with any proposed acceptance threshold limits for various aggregate tests should be determined using the statistical data provided
