Appendices Bibliography *Fundamentals of Dimensional Analysis* Alberto N. Conejo, 2021-05-31 This is the first book which systematically describes an integral approach on dimensional analysis The amount of textbooks on dimensional analysis is huge however most of the books start with the definition of the relevant variables When the variables are given to the reader without prior knowledge on each problem it has serious consequences the usefulness of dimensional analysis is not appreciated is not possible to understand the real challenges of this subject and the result which is a general relationship with dimensionless groups is useless This book closes the hole in previous books because in addition to describe step by step how to reach the general relationship with dimensionless groups which creates solid basis of different metallurgical problems to understand the role of the relevant variables It provides a full description on how to obtain the experimental data and applies the experimental data to transform the general relationship in a particular solution Once the reader learns how to design the experimental work and uses that information to define the particular solution it is possible to assess if the selection of variables was adequate or not The book is useful for both undergraduate and graduate students

The Evolution of Gun Making Peter G. Smithurst, 2024-12-31 Examines the shift from hand craft to mechanized firearm production focusing on the French Model 1777 and Russian Model 1808 muskets A variety of factors surround military firearms they needed to be produced in large numbers to a standardised pattern at an affordable price This book examines the transition from traditional hand craft methods to the beginnings of mechanised manufacture using as examples the French Model 1777 and the Russian Model 1808 infantry muskets A number of factors led to this choice The French Model 1777 musket designed by Honor Blanc working under General Gribeauval contained many novel features which became blueprints for the arms of numerous countries and was copied in its entirety by Russia Another factor is that they are the only firearms whose manufacture is covered in contemporary accounts A third factor is that they provide contrasts in their methods of manufacture the French 1777 musket was largely produced by hand craft methods whereas in Russia we see the beginnings of extensive mechanisation in the early 19th century Another important aspect which appears is interchangeability the ability to exchange identical parts of identical mechanism without special adjustment This is a vital factor at the foundation of modern manufacturing and first appears in early 18th century France was pursued again by Blanc in 1777 and was picked up in Russia For the first time all these technologies are examined explained compared and contrasted in extensive detail

Styles of Mathematization: The Case of 18th

Century Electrostatics Lucas Marcelo Cavalari Nardi, 2025-08-16 This book studies the mathematization of physics with a special emphasis on 18th century electrostatics as a case study The mathematization of a scientific field is a fruitful yet underdeveloped topic that can be seen through different lenses A noticeable one is the Inferential Conception proposed by Mark Colyvan and Ot vio Bueno In this regard the use of mathematics is understood as a set of mappings relating the physical realm and the mathematical realm However the historical process related to the use of mathematics remains unsolved philosophical frameworks usually have a hard time dealing with historical dimensionality Therefore this book provides a study of the historical process of mathematization going beyond the framework in order to explain the use of mathematics a historically using the aforementioned investigation of 18th century electrostatics The research developed gravitates around two centers the history of physics and the philosophy of science making the book of equal importance to both historians and philosophers of science

Marking the Jews in Renaissance Italy Flora Cassen, 2017-08-03 It is a little known fact that

as early as the thirteenth century Europe's political and religious powers tried to physically mark and distinguish the Jews from the rest of society. During the Renaissance, Italian Jews first had to wear a yellow round badge on their chest and then later a yellow beret. The discriminatory marks were a widespread phenomenon with serious consequences for Jewish communities and their relations with Christians. Beginning with a sartorial study of how the Jews were marked on their clothing and what these marks meant, the book offers an in-depth analysis of anti-Jewish discrimination across three Italian city-states: Milan, Genoa, and Piedmont. Moving beyond Italy, it also examines the place of Jews and Jewish law in the increasingly interconnected world of Early Modern European politics.
