Encyclopedia of Hurricanes, Typhoons, and Cyclones David Longshore, 2008 An A to Z reference to hurricanes typhoons cyclones and tropical storms contains four hundred entries that detail the science history and social impact of these severe weather phenomena **Encyclopedia of Hurricanes, Typhoons, and Cyclones**, 1998 Hurricanes Paul V. Kislow, 2008 A hurricane is a tropical storm with winds that have reached a constant speed of 74 miles per hour or more Hurricane winds blow in a large spiral around a relative calm centre known as the eye The eye is generally 20 to 30 miles wide and the storm may extend outward 400 miles As a hurricane approaches the skies will begin to darken and winds will grow in strength As a hurricane nears land it can bring torrential rains high winds and storm surges A single hurricane can last for more than 2 weeks over open waters and can run a path across the entire length of the eastern seaboard August and September are peak months during the hurricane season that lasts from 1 June to 30 November This book presents the facts and history of hurricanes *What are the potential causes of incorrect predictions of tropical cyclone intensification in medium-range ensemble forecasts?* Nico Bauer, 2022-05-12 Tropical cyclones TC are the most destructive weather phenomena in the world These storm systems are common in large parts of highly populated tropics and subtropics with favorable atmospheric conditions Society's vulnerability to them and the associated annual economic costs have risen steadily mean worldwide insured losses averaged 75 billion USD per year in the 10 years between 2009 and 2019 Cinco et al 2016 analyzed TC data and observed that in the period from 1951 to 2013 an average of 19.4 TCs entered the Philippine Area of Responsibility in the

Western North Pacific and nine TCs moved over the islands. Consequently the Philippines have the highest number of landfalling storms and the highest rate of severe TC worldwide. In turn the TCs that move over the islands into the South China Sea frequently affect the coast of Vietnam. Through a spatial assessment of TC vulnerability, Nguyen et al. 2019 have demonstrated a high or very high susceptibility in most parts of coastal Vietnam. The most extreme event over the WNP in the last century was Typhoon Haiyan, which caused 6 300 deaths and widespread economic and socioeconomic damage. This significant susceptibility implies the high importance of improving weather forecast models for greater predictive capability. In recent decades the quality of forecasting tropical cyclone tracks has increased steadily at the European Center for Medium Range Weather Forecast and other numerical weather prediction centers. Nevertheless, intensity predictions still present more significant challenges.

Hurricane of Independence Tony Williams, 2009-07-01 The sleeper history hit of 2008 released in paperback to coincide with the heart of hurricane season. On September 2, 1775, the eighth deadliest Atlantic hurricane of all time landed on American shores. Over the next days it would race up the East Coast striking all of the important colonial capitals and killing more than four thousand people. In an era when hurricanes were viewed as omens from God, what this storm signified to the colonists about the justness of their cause would yield unexpected results. Drawing on ordinary individuals and well-known founders like Washington and Franklin, Tony Williams paints a stunning picture of life at the dawn of the American Revolution and of the weighty choice people faced at that deciding moment. Hurricane of Independence brings to life an incredible time when the forces of nature and the forces of history joined together to produce courageous stories of sacrifice, strength, and survival.

Cyclone Country Christopher J. Spicer, 2020-09-09 The storm has become a universal trope in the literature of crisis, revelation, and transformation. It can function as a trope of place of apocalypse and epiphany of cultural mythos and story and of people and spirituality. This book explores the connections between people, place, and environment through the image of cyclones within fiction and poetry from the Australian state of Queensland, the northern coast of which is characterized by these devastating storms. Analyzing a range of works including Alexis Wright's *Carpentaria*, Patrick White's *The Eye of the Storm*, and Vance Palmer's *Cyclone*, it explains the cyclone in the Queensland literary imagination as an example of a cultural response to weather in a unique regional place. It also situates the cyclones that appear in Queensland literature within the broader global context of literary cyclones.

Disaster and Human History Benjamin Reilly, 2022-05-13 Human history is periodically punctuated by natural disasters, from Vesuvius' eruption to the modern-day COVID-19 pandemic. Volcanoes have buried entire cities, earthquakes have reduced structures to smoldering ruins, floods and cyclones have wreaked havoc on river valleys and coastlines, and desertification and climate change have weakened society's underpinnings. Death tolls are often escalated by starvation and illness, which frequently occur in tandem. This second edition assesses natural disasters on human society and the effect of strategies developed to reduce their impact. This book addresses the interconnectivity of disaster and human responsibility through 23 updated case

studies including a new chapter on the 2011 T hoku tsunami and the ensuing Fukushima nuclear disaster *Natural Hazards and Peoples in the Indian Ocean World* Greg Bankoff, Joseph Christensen, 2016-07-09 This book examines the dangers and the patterns of adaptation that emerge through exposure to risk on a daily basis By addressing the influence of environmental factors in Indian Ocean World history the collection reaches across the boundaries of the natural and social sciences presenting case studies that deal with a diverse range of natural hazards fire in Madagascar drought in India cyclones and typhoons in Oman Australia and the Philippines climatic variability storms and flood in Vietnam and the Philippines and volcanic eruptions earthquakes and tsunamis in Indonesia These chapters written by leading international historians respond to a growing need to understand the ways in which natural hazards shape social economic and political development of the Indian Ocean World a region of the globe that is highly susceptible to the impacts of seismic activity extreme weather and climate change *We Were an Island* Peter P. Only One Is Good To The Last Drop* John E. Horner,2012-06-05 In 1947 at the age of nine I was instructed to help my older brothers drain the corn rows Aware then that water was precious in Nebraska I obeyed but the question stayed with me My first paying job at the age of 12 was a two week assignment of weeding 250 seedling pines for 1 00 total pay I didnt know then that I would become an earnest advocate for trees Fast forward through the years of study and work and this advance postscript to my book comes to mind This book proposes to reduce the occurrence of El Nino to about once in 15 years I believe it is possible to all but eliminate late season devastating hurricanes With those two beliefs I endeavor to impel the diligent into this book I believe I followed faithfully where scholars led and only drew necessary and fitting conclusions And finally the belief that we should successfully harness the mighty geothermal power of Yellowstone before the tragedy of eruption With this understanding of farm family and the future necessity of clean water JOHN E HORNER has endeavored to acknowledge some of the current
