*Energy, Economic Growth, and Geopolitical Futures* Evan Hillebrand, Stacy Closson, 2015-03-27 Top drawer scenario builders map a unique array of big picture global outcomes shaped by energy prices economic growth and global harmony Better still they give the reader tools to build her own scenarios An essential reference for experts concerned with geopolitical and geoeconomic futures Gary Clyde Hufbauer Reginald Jones Senior Fellow Peterson Institute for International Economics The way the authors have integrated the International Futures model into scenario analysis is very instructive and amounts to a useful methodological contribution to the literature on scenario analysis As an energy economist I also appreciate that the book adds to the usual energy market forecasting exercises that take economic growth as exogenous to the energy markets and ignore political factors Peter Hartley Mitchell Professor of Economics and Rice Scholar in Energy Studies at the Baker Institute Rice University Evan Hillebrand and Stacy Closson have written an interesting and original book in which they analyze several different scenarios for economic growth energy prices and international conflict over the next forty years in an engaging and accessible style I recommend this book to anyone who wishes to understand the range of possible futures James Morrow Professor of Political Science University of Michigan

*Energy, Economic Growth, and Geopolitical Futures* Evan Hillebrand, Stacy Closson, 2015-04-17 Eight varied scenarios integrating a quantitative model and qualitative analysis that examine the interplay of three key drivers over the next four decades This book presents eight varied scenarios of possible global futures emphasizing the interconnectedness of three drivers of change energy prices economic growth and geopolitics Other published global future scenarios focus on only one of these factors viewing for example economic growth as unaffected by energy prices or energy prices in isolation from geopolitical conditions In this book Evan Hillebrand and Stacy Closson offer a new approach to scenario construction that acknowledges the codependence of these key drivers and integrates qualitative analysis with a quantitative model The eight scenarios represent possible combinations of high or low energy prices strong or weak economic growth and global harmony or disharmony across three time periods the 2010s 2020 to 2040 and 2040 to 2050 The Regional Mercantilism scenario for example envisions high energy prices weak economic growth and global disharmony To impose numerical consistency across scenarios Hillebrand and Closson employ the International Futures IFs model developed by Barry Hughes Interested readers can download this interactive model to alter or build scenarios themselves Assessing the probability of each scenario they conclude that increased U S energy supply and the sustainability of the Chinese growth miracle are the most significant drivers over the next forty years

**Racing to the Top** William R. Thompson, Leila Zakhirova, 2019 In the international political economy of the last two millennia there tends to be one state leading the world as the foremost producer of energy and new technology In *Racing to the Top* William R Thompson and Leila Zakhirova argue that the US and China like previous leading countries rely on energy transition or the development of alternative energy in order to make new technology relatively inexpensive to develop and to fuel While the

US has historically held the lead its edge in the global energy economy appears to be eroding and as energy leadership diminishes so does the country's position in world politics Thompson and Zakhirova take a long view in order to show what will be necessary for a new power to emerge as the system leader then map a path forward for energy policy Informed by a deep knowledge of world history political economy and environmental technology this book is the first complete overview of energy transitions over the past thousand years Introduction to Energy and Climate Julie Kerr, 2017-08-09 The purpose of this textbook is to provide a well rounded working knowledge of both climate change and environmental sustainability for a wide range of students Students will learn core concepts and methods to analyze energy and environmental impacts will understand what is changing the earth's climate and what that means for life on earth now and in the future They will also have a firm understanding of what energy is and how it can be used This text intends to develop working knowledge of these topics with both technical and social implications Students will find in one volume the integration and careful treatment of climate energy and sustainability Renewable Energy Sources and Climate Change Mitigation Ottmar Edenhofer, Ramón Pichs-Madruga, Youba Sokona, Kristin Seyboth, Susanne Kadner, Timm Zwickel, Patrick Eickemeier, Gerrit Hansen, Steffen Schlömer, Christoph von Stechow, Patrick Matschoss, 2011-11-21 This Intergovernmental Panel on Climate Change Special Report IPCC SRREN assesses the potential role of renewable energy in the mitigation of climate change It covers the six most important renewable energy sources bioenergy solar geothermal hydropower ocean and wind energy as well as their integration into present and future energy systems It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non technical obstacles to their application and diffusion SRREN brings a broad spectrum of technology specific experts together with scientists studying energy systems as a whole Prepared following strict IPCC procedures it presents an impartial assessment of the current state of knowledge it is policy relevant but not policy prescriptive SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers the private sector and academic researchers

**Proceedings**, 1997 **World Energy Assessment** United Nations Development Programme, 2000 The report discusses the linkages between energy and economic social environmental and security issues and analyses the contradictions between current patterns of use and objectives in these areas The WEA also reviews energy resources and technology options from the point of view of sustainability including better end use efficiency greater reliance on renewable sources of energy and next generation nuclear and fossil fuel technologies Further the report examines plausible scenarios for combining various options to achieve a sustainable and relatively prosperous future The report concludes by examining policy options for producing and using energy in ways that are compatible with sustainable development *Proceedings of the Fifteenth World Petroleum Congress, Natural Gas, Reserves Environment & Safety Business/Management Research and Transportation* World Petroleum Congress (WPC), 1998-10-27 The WPC is dedicated to the application of scientific advances

in the oil and gas industries to technology transfer and to the use of the world's petroleum resources The Fifteenth World Petroleum Congress was held between 12-16th October 1997 in Beijing China *Central Asia and the Caucasus* ,2007
